1. Introduction to Bank's Capital adequacy framework

This document presents the Pillar 3 disclosures of FAB ("the Group") on a consolidated basis as at 31 December 2024. The purpose of Pillar 3 disclosures is to allow market participants to assess key pieces of information on the firm's capital, risk exposures and risk assessment process.

The Group is regulated by the Central Bank of UAE (CBUAE) and follows the Pillar 3 disclosure requirements as stated under the CBUAE guidelines, issued in December 2022, on the implementation of Basel III standards. CBUAE also initiated Basel III regulatory reporting in 2017 with new capital standards for UAE Banks.

The Pillar 3 disclosures are to be read in conjunction with the Audited Financial Statements as of 31 December 2024.

1.1 Regulatory Framework

The Group assesses its capital adequacy based on the updated Basel III regulations published by the CBUAE vide notice no. CBUAE/BSD/N/2022/5280 in Dec 2022. The framework is structured around the following three Pillars:

- Pillar 1 on minimum capital requirements for credit, market, and operational risk
- Pillar 2 on the supervisory review process and the Internal Capital Adequacy Assessment Process (ICAAP)
- Pillar 3 on market discipline

1.2 Pillar 1 – Minimum Capital Requirement

The Group is governed by CBUAE guidelines on regulatory capital requirements on a consolidated basis, including all its subsidiaries and overseas branches. In addition to capital management at Group level, the overseas branches and subsidiaries are also supervised by their local regulators for operations carried out by those specific entities. Pillar 1 defines the total minimum capital requirements for credit, market, and operational risk. FAB currently uses standardised approach for assessment of Credit, Market and Operational Risk weighted assets (RWA). Under the standardised approach, regulatory prescribed risk weights and parameters are applied to calculate Pillar 1 capital requirements.

During 2011, Basel Committee on Banking Supervision (BCBS) officially announced the final set of revised regulatory capital rules known as "Basel III", which are being phased in globally. Subsequent to Basel III consultation paper issued by CBUAE in 2016, the Central Bank of the UAE published the "Regulations re Capital Adequacy" (the "Basel III Regulations"), which were effective from 1 February 2017. The Basel III Regulations are supported by the accompanying standards entitled "Standards for Capital Adequacy of Banks in the UAE" which were updated by the Central Bank of the UAE in December 2022 by virtue of Notice No. CBUAE/BSD/N/2022/5280 (the "Accompanying Standards"). The Accompanying Standards elaborate on the supervisory expectations of the Central Bank of the UAE with respect to the relevant Basel III capital adequacy requirements.

CBUAE has put in regulatory thresholds for Common Equity Tier 1, Tier 1 and overall regulatory Capital.

1. CET1 must be at least 7.0% of risk weighted assets (RWA);
2. Tier 1 Capital must be at least 8.5% of RWA;
3. Total Capital, calculated as the sum of Tier 1 Capital and Tier 2 Capital, must be at least 10.5% of RWA.

On top of this minimum capital requirement CBUAE has also mandated the Banks to keep additional buffers.

1. In addition to the minimum CET1 capital of 7.0% of RWA, banks must maintain a capital conservation buffer (CCB) of 2.5% of RWAs in the form of CET1 capital
2. To achieve the broader macro-prudential goal of protecting the banking sector from periods of excess aggregate credit growth and in addition to the CCB requirements, banks may be required to implement the countercyclical buffer (CCyB). Banks must meet the CCyB requirements by using CET1 capital. The level of the CCyB requirements will vary between 0% - 2.5% of RWA and be communicated by the CBUAE with an adequate notice period.
3. Banks classified as domestically systemically important banks will be required to hold additional capital buffers the level for which may vary as per the size of the Bank and would be decided by CBUAE. The requirement for FAB for D-SIB buffer is 2.0% of RWA in the form of CET1.

These requirements are summarised in the table below:

Capital Element	Requirement
Minimum Common Equity Tier 1 Ratio	7.0%
Minimum Tier 1 Capital Ratio	8.5%
Minimum Capital Adequacy Ratio	10.5%
Capital Conservation Buffer	2.5%
Domestic Systemically Important Banks Buffer (FAB)	2.0%
Countercyclical buffer (0% - 2.5%)	0.13%*

** 0% CCyB requirement in UAE, but Banks required to keep CCyB as per geographical distribution of private credit RWA*

CBUAE has also released revised Capital standards for Basel III capital instruments. Capital instruments that no longer qualify as non-common equity Tier 1 or Tier 2 capital will be phased out over 10 years starting from January 2018.

The capital ratios for the Group as of 31 Dec 2024 are given below. All of these are well above the CBUAE minimum.

	31-Dec-24	31-Dec-23
Common Equity Tier 1 Ratio	**13.68%**	**13.83%**
Tier 1 Capital Ratio	**15.37%**	**15.66%**
Capital Adequacy Ratio	**17.47%**	**17.41%**

a) Credit Risk

The Group uses the standardised approach to calculate RWA for credit risk. It uses risk weights to convert exposures into RWA as per the CBUAE guidelines for capital adequacy which can range between 0% for certain sovereign exposures to 952% for certain categories (akin to deduction). Where applicable, mainly for unfunded, exposures are adjusted for credit conversion factor (CCF) in accordance with the CBUAE guidelines. For non-retail exposures the risk weights are driven by credit ratings published by external credit agencies approved by the CBUAE.

The Group uses the comprehensive approach for credit risk mitigation to calculate its net exposure amount to a counterparty for capital adequacy purposes in order to take into account the impact of the collateral. Using haircuts, the Bank adjusts both the amount of the exposure to the counterparty and the value of any collateral received in support of that counterparty to take account of possible future fluctuations in the value of either, occasioned by market movements.

The Group uses the Standardised Approach to calculate RWA for Counterparty credit risk (CCR) by (i) calculating the Exposure At Default (EAD) for each netting set (group of contracts with a single counterparty subject to a legally enforceable agreement for net settlement, and satisfying all of the conditions for netting sets specified by CBUAE) associated with a counterparty, (ii) summing EAD across netting sets for that counterparty, (iii) calculating risk-weighted EAD by multiplying the total EAD for a counterparty by the risk-weight corresponding to the exposure class to which that counterparty belongs under general risk-based capital requirements, (iv) summing the resulting risk-weighted EAD across all counterparties within a given exposure class and (v) summing across exposure classes.

The Group uses Mandate-based approach (MBA) for computing RWA for Equity Investments in Funds (EIF) by using the information as per fund's mandate or in the relevant regulations governing such investment funds to perform a conservative calculation of the applicable risk weights for the assets of the fund.

The Group has begun to calculate RWA for Credit Valuation Adjustment (CVA) from Q2 2022 onwards vide notice no. CBUAE/BSD/N/2020/4980. Under the standardised approach the calculation relies on regulatory measures of counterparty credit risk exposure, and recognizes the impact of differences in maturity, as well as adjustments to reflect certain common hedging activities that banks use to manage CVA risk.

b) Market Risk

The Group uses the standardised approach to calculate RWA for market risk as per the CBUAE guidelines. In calculating RWA for market risk, the Group distinguishes between general and specific risk and between holdings in the trading book and holdings outside the trading book. The risk is quantified for positions for Interest rate risk, Foreign exchange risk, Equity investments risk, Commodities exposure risk and Options risk.

c) Operational Risk

The Group applies the standardised approach for calculating capital requirement for operational risk. The calculation is based on average operating income for the past 3 years and classification of the operating income into 8 Basel classification lines - Corporate Finance, Trading and Sales, Payment & Settlement, Commercial Banking, Agency Services, Retail Brokerage, Retail Banking and Asset Management. Capital requirement is calculated for each of the business lines as per their respective multipliers as per BIS which range from 12% to 18%. The RWA for operational risk are calculated by dividing the capital requirement by CBUAE capital requirement multiplier.

1.3 Pillar 2 – ICAAP and Supervisory Review Process

The ICAAP at FAB is considered as an essential tool to address all current and potential material risks – as assessed by the Group's risk governance and internal control framework, capital planning and management framework, and strategic planning process. The Group ensures that it not only satisfies the minimum regulatory capital requirements of CBUAE but also maintains appropriate internal

capital levels in line with the current and anticipated capital requirements and to withstand stress scenarios. Key highlights of ICAAP are as below:

- Business background & Group structure
- Business model
- Governance and Risk management arrangements
- Risk appetite
- Risk assessment and disclosures
- Business strategy & financial projections
- Stress testing and scenario analyses

Risk Appetite - Risk Appetite reflects Bank's risk management philosophy and in turn influences its culture and operating style and is the cornerstone of an organization's ERM framework**.** The risk appetite framework for FAB has been developed using the top-down approach. The entire risk appetite framework has been designed & implemented through three-tiered mechanism for Group Level, Business and Support Groups, Business Sub-units, and embedding and implementation of Risk Appetite.

Risk assessment and disclosures - Analysis of risk-bearing capacity of an institution needs clear classification & assessment of all its material risks and their aggregation at appropriate levels. These not only include Pillar I risks (credit risk, market risk and operational risk) but other Pillar II risks as well viz. concentration risk, interest rate risk in the banking book, liquidity risk, strategic risk, etc. FAB assesses the capital requirement for Pillar II risks using different methodologies / scorecards as per the Group Pillar II & Stress testing methodology document. It also performs an internal assessment of the Pillar I risks using alternative methodologies to evaluate its adequacy.

Business strategy & financial projections - Senior management of the Group is involved in setting the direction through strategy planning / budgeting sessions that are held on a regular basis. All business and support functions are involved in the process. Five-year CAR projections are performed to ensure that the Group has sufficient capital to meet anticipated and contingent requirements driven by current and future business strategy.

Stress testing and scenario analyses - In line with international best practices, FAB has a comprehensive stress testing framework in place, which is governed by the Group ICAAP Policy and Group Pillar II & Stress testing Methodology, approved by GRC and BRESGC. The Group conducts regular stress test exercises to assess the resilience of the group to adverse market developments under stress scenarios. The risk factors are shocked using the assumptions made under the respective scenarios and the corresponding impact on the capital adequacy is determined. The Group uses various macroeconomic and idiosyncratic stress tests in order to project capital need and capital levels under various stress scenarios.

Governance - Group Risk Management is responsible for the preparation of ICAAP report along with support from different departments like Finance, Strategy, Credit, Other Business and Support Units etc. The final report is presented / circulated to the GRC and BRESGC members for their review and approval as part of ICAAP submission process. Any challenge / feedback from GRC and BRESGC

members are duly noted and incorporated in the report which is then submitted to CBUAE. The report is independently reviewed by Internal audit on an annual basis, while the Framework including the methodologies, computations and assumptions are externally validated every three years as per CBUAE guidelines.

1.4 Pillar 3 – Market Discipline

The Group discloses to its external stakeholders a detailed qualitative and quantitative information on its risk management practice and capital adequacy in line with the CBUAE Pillar 3 guidelines. Pillar 3 complements the Pillar 1 - minimum capital requirements and the Pillar 2 – ICAAP and supervisory review process. The purpose of Pillar 3 disclosures is to enhance market discipline through disclosure requirements which allows market participants to assess the risk exposures of the Bank around capital, material risk exposures and internal risk assessment processes and mitigation strategies, and hence assess the strength of the Bank. The disclosures are both qualitative and quantitative and have been prepared at the FAB group level. The reporting frequency of the revised set of disclosures has been defined by CBUAE.

Assurance: The information provided by the Bank under Pillar 3 Disclosures is reviewed by the internal audit of the Bank as well as the external auditor (Agreed upon Procedures review) for all Pillar 3 reports.

2.2 OVA: Bank Risk Management Approach

Group Business Model and Overall Risk Profile

FAB's business model focuses on core banking activities including Investment Banking, Corporate and Commercial Banking, Global Markets - Trading, Consumer Banking and Private Banking. The revenue streams are diversified in terms of its customer base, product & service offerings and geographic footprint to generate robust and stable revenue stream. FAB has active international presence across 18 countries (outside of the UAE) through affiliate entities, branches, representative offices and subsidiaries, with a clear focus on enhancing its foothold in select growth markets with the intent of maintaining its growth levels and delivering acceptable returns to shareholders. The international business for FAB is aligned under respective business lines in order to enhance operational efficiency. FAB also maintains a strong capital base and liquidity position to have a solid foundation for future growth & investment. FAB's risk management framework ensures active risk participation in business decisions across all business areas.

The details of the business model for each of the business segments are given below. The operating structure consists of six key business segments across geographic segments that are driving the business strategy, customer value propositions, products and channel development and customer relationships in addition to supporting the delivery of the Group's financial performance.

The Group reorganised its business model in 2021, so that Corporate & Investment Banking and Personal Banking groups were re-segmented into four distinct business lines: Investment Banking, Corporate & Commercial Banking, Consumer Banking and Private Banking. Further, FAB separated its Global Markets unit into a separate business division (which was part of Investment Banking earlier). This repositioned the Group's businesses to be more customer centric and enabled specialist product and service propositions aligned to the respective customer bases the Group services to drive competitive advantage and enhance revenue generation capabilities.

Investment Banking (IB) offers banking and financing solutions, including corporate & islamic finance, capital markets, transaction banking, trade, liquidity and cash management services along with a broad range of risk management solutions across credit, rates, FX and money market products. Focused on Institutional clients, IB team enhances product delivery and specialization across various customer sectors which includes Government, Sovereign & Public Sector, Sovereign Wealth Fund & Financial Sponsors, Natural Resources, Global Diversified Industrials, Financial Institutions Group & Global Subsidiaries.

Corporate and Commercial Banking (CCB) focuses on large corporates, medium and small entities with diversified products offering across sub segments which includes Corporate Banking, Contracting, Commercial Banking and Privileged Client Group

Global Markets-trading (GM-trading) encompasses trading, market-making, risk management and investment management activities across Linear products (FX, Rates, Credit and Securities financing), Structured Products, Commodities, and Investments. Global Markets Trading delivers best in class trading & risk management solutions, providing our clients access to a broad range of financial products. Global Markets sales income which are pertaining to customers are reflected in the respective underlying business segment managing the client relationship.

Consumer Banking (CB) targets consumer & elite segment across conventional and islamic sector. The value proposition includes everyday banking products such as current accounts, deposits, credit cards, loans, wealth products etc. The business furnishes variety of distribution and sales channels, including mobile and internet banking, branches, direct sales agents and through its banking subsidiaries namely First Abu Dhabi Islamic Finance.

Private Banking (PB) targets affluent and high net-worth customers across conventional and Islamic sector. The product range includes everyday banking products plus sophisticated investment solutions, brokerage and securities services. The business furnishes variety of distribution and sales channels, including mobile and internet banking, branches, relationship managers and through its banking subsidiaries including mainly FAB Securities.

Head Office (HO) provides centralised human resources, information technology, operations, finance, strategy, investor relations, risk management, credit management, corporate communications, legal & compliance, internal audit, procurement, treasury operations and administrative support to all of its business units. As part of the Group's diversified business model, HO also includes certain subsidiaries partially or fully owned by the Group, providing banking services and other complementary offerings across real estate and property management services. These include FAB Misr, First Gulf Libyan Bank, Mismak, Abu Dhabi National Properties and certain other portfolios.

Geographic segments The Group manages its various business segments through a network of branches, subsidiaries and representative offices within the two defined geographic segments which are UAE and International. International business is further divided into two sub-segments which are Europe, Americas, Middle East and Africa ("EAMEA") and Asia Pacific ("APAC").

Group Risk Governance

The FAB Board is the principal decision-making forum for the Bank. Its responsibilities are set out in the Board Charter and include approving the strategy, annual budget and organization structure; setting its risk appetite and risk management strategy; monitoring financial performance; establishing the corporate governance framework; and approving the company's corporate values. Setting the tone at the top is a critical part of the Board's role. Defining the values and, along with senior management, leading by example, are ways of ensuring that the organisation will Grow Stronger through a shared set of values that cascade throughout the organisation and is embodied in daily interactions between employees. This will facilitate the constant drive to enhance customer service across all business lines. The Board is also responsible for providing oversight and effective challenge to senior management across a range of matters including its execution of the agreed strategy and for Board and executive management succession planning. The Board formally meets at least six times a year. The Group's Islamic banking activities are conducted in accordance with Islamic Shari'ah rules and principles as interpreted by the Internal Shariah Supervision Committee ("ISSC") in accordance with the resolutions issued by the Higher Shariah Authority ("HSA").

The role of the CEO and the executive management team is to execute the agreed business strategy within the agreed risk appetite. It is also the responsibility of the executive team to develop a mechanism by which FAB's vision, values and behaviors are successfully shared, communicated and embedded in the business. Much of this is achieved through the work of the Executive Management Committee and other senior Management Committees. The executive management team is also responsible for timely and accurate reporting to the Board and Board Committees and for the escalation of appropriate information or items.

The following exhibit is a diagrammatic representation of the Board and Committee Structure within FAB Group, including its international operations.

1. Board Committees

a) The Board Management Committee (BMC)

The BMC approves and oversees execution of the FAB Group's business plan per the strategy approved by the Board and oversees and reviews material aspects of the business of the FAB Group. The Committee meets quarterly or more frequently as deemed necessary. The BMC is composed of 3 Board Members. Based on the Chair's approval, the Group Chief Executive Officer ("CEO") will act as a permanent invitee. The guiding principles and detailed roles & responsibilities are covered in the committee charter.

b) The Board Audit Committee (BAC)

The BAC ensures oversight of the effectiveness of the internal control systems and the quality and integrity of financial statements and financial reporting. In addition, it reviews, approves and oversees the internal and external proposed audit plan and the coordination between internal and external auditors. BAC also ensures the effectiveness and independence of the compliance function. The Group Chief Audit Officer ("GCAO") provides reports to the Committee on internal controls and the Group Chief Compliance Officer reports to the BAC on compliance related matters such as fraud and whistleblowing. The Committee meets quarterly or more frequently as deemed necessary. The BAC is composed of 5 Non-Executive Board Members and the GCAO who is a permanent attendee at the Committee. The Group Chief Compliance Officer shall be a permanent invitee at the Committee. The guiding principles and detailed roles & responsibilities are covered in the committee charter.

c) The Board Remuneration and Nomination Committee (REMCO)

The REMCO recommends and oversees the appointment and termination of Group Board Directors and succession planning for the Group Executive Committee members. This includes an assessment of the skills, knowledge and expertise needed to ensure they are positioned to discharge their responsibilities in the interests of the shareholders and FAB Group. The Committee also reviews and recommends to the Board, FAB's reward policy framework, approves and oversees reward design and ensures it is appropriate and consistent with the FAB Group's culture, values, business performance and risk strategy. The Committee meets at least twice a year or more frequently as deemed necessary. The REMCO is composed of 3 Board Members, with the Chair's approval the Group Chief Executive Officer may act as a permanent invitee along with the Group Chief Human Resources Officer who is a permanent attendee at the REMCO. The guiding principles and detailed roles & responsibilities are covered in the committee charter.

d) The Board Risk and ESG Committee (BRESGC)

The BRESGC provides oversight and advice to the Group Board in relation to current and potential future risk exposures of the FAB Group. It also considers and helps direct future risk and ESG strategies, including determination of risk appetite and tolerance as well as promote a risk and ESG awareness culture among the Group. The Committee meets quarterly or more frequently as deemed necessary. The bank's risk management function has a direct reporting line to the BRESGC through the GCRO. The BRESGC is composed of 5 Board Members, the GCEO and the GCRO as permanent attendees. The guiding principles and detailed roles & responsibilities are covered in the committee charter.

2. Management Committees

a) Group Executive Committee (Group EXCO)

The Group EXCO is FAB Group's senior management level committee, and it operates under a delegated authority from the FAB Board. It is responsible for identifying matters required or appropriate for escalation to the Group Board or Board Committees. The Group EXCO also supports the GCEO to determine and implement the Bank's strategy as approved by the FAB Board.

The key responsibilities of the Committee include decisions on the Bank's strategy, annual budgets, capital management, risk management and FAB's more material policies and procedures. The Group EXCO may delegate certain authorities and powers to management committees and individuals, but the Group EXCO reserves the authority to deal with strategy, annual budget and structure; financial reporting and controls; capital management; risk and internal control; contracts; corporate governance matters; executive remuneration and human resources policies, and group policies generally and any other matters in its discretion other than the matters reserved to the Board. The composition, guiding principles and detailed roles & responsibilities of the Group EXCO are covered in the Group EXCO Charter.

b) Group Risk Committee (GRC)

GRC oversees the Group-wide risk strategy and exposures to enable integrated risk management in an effective manner. The GRC will report relevant matters to the Group EXCO, and as appropriate the BRESGC, advising and informing them as required on the Group's risk appetite and framework. The composition, guiding principles and detailed roles & responsibilities of GRC are covered in the GRC Charter.

c) Group Compliance Committee (GCoC)

GCoC assists the BAC in fulfilling its objective of overseeing the Bank's regulatory responsibilities as well as ensuring the Bank's compliance with the applicable laws and regulations issued by various regulatory authorities across the Group. The Committee also oversees that the relevant policies and procedures are complied with across the Group. The composition, guiding principles and detailed roles & responsibilities of GCoC are covered in the GCoC Charter.

d) Group Asset & Liability Committee (G-ALCO)

G-ALCO is the driving force and key decision maker behind the structure and quality of the balance sheet. It is directly accountable to the BRESGC for ensuring that the risks within the Group's asset and liability positions are prudently managed. The composition, guiding principles and detailed roles & responsibilities of G-ALCO are covered in the G-ALCO Charter.

e) Group Credit Committee

Group Credit Committee assists in the development and implementation of the Bank's credit, investment strategy and the related policies and procedures. The aim of Group Credit Committee is to have an overall credit oversight of the Group and decide on credit policy and governance related matters. The composition, guiding principles and detailed roles & responsibilities of the committee are covered in the Group Credit Committee charter.

f) Group HR Steering Committee (GHRSC)

GHRSC assists the Group EXCO and the REMCO to implement strategic and operational HR initiatives to deliver the Group's long term shareholder value. The Committee will be the formal sponsor of all material HR initiatives across the Bank in line with the Bank's Employee Value Proposition ("EVP"). The composition, guiding principles and detailed roles & responsibilities of GHRSC are covered in the GHRSC charter.

g) Group Operational and Fraud Risk Committee (GO&FRC)

GO&FRC assists the Group EXCO and the BRESGC in fulfilling their objectives of overseeing the Bank's Operational and Fraud Risk Management. The key responsibilities of this committee are to define guidelines to identify and manage Operational & Fraud risks in all new products, processes, and activities, defining scope, policy, objectives, assumptions, and roles / responsibilities of the Group's Operational & Fraud Risk Management Policies. The composition, guiding principles and detailed roles & responsibilities of the Group Operational and Fraud Risk Committee are covered in the GO&FRC charter.

h) Group Technology Risk & Information Security Committee (GTRISC)

The GTRISC assists the EXCO and the Board Risk and ESG Committee ("BRESGC"). The primary objectives of the GTRISC are overseeing, reviewing and taking decisions on Technology and Information Security risk management status and health, including its alignment to the risk appetite of the FAB Group. The composition, guiding principles and detailed roles & responsibilities of the GTRISC are covered in the GTRISC charter.

i) Group Technology Steering Committee (GTSC)

GTSC assists in fulfilling Group EXCO's governance and oversight responsibilities of all technology and information systems across the FAB Group and supports the work of the BRESGC in its oversight of the Group IT governance framework. The GTSC ensures alignment of business strategies with technology priorities and acts to protect and enhance the shareholders' investment in technology. The composition, guiding principles and detailed roles and responsibilities of GTSC are covered in the GTSC charter.

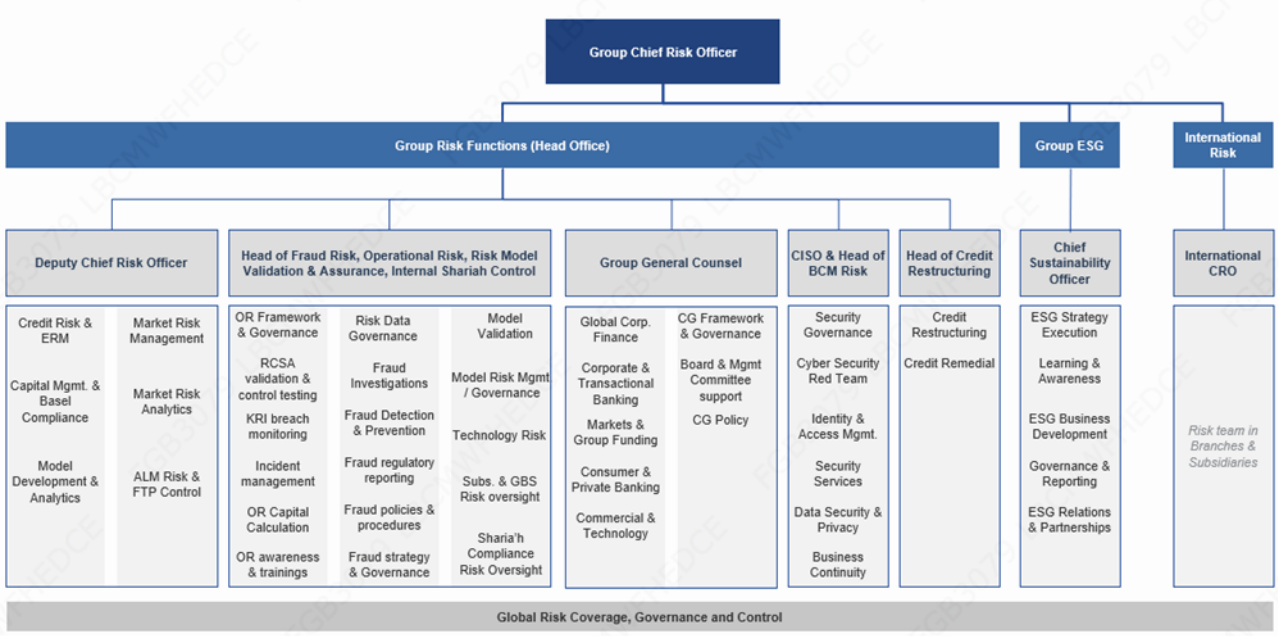

j) Group ESG Committee (G-ESGC)

The G-ESGC operates under a delegated authority from the Group Executive Committee. It also assists the BRESGC. G-ESGC is the senior authority at management level for decision making on all ESG related matters of the Group. The Primary objective of the G-ESGC is to promote and oversee the ESG strategy, culture, and awareness across FAB Group.

Group Risk

FAB has an independent risk management function – Group Risk Management which is led by the GCRO. The function comprises sub-functions such as enterprise risk, credit risk, capital risk, market and interest rate risk, liquidity risk, model risk, operational and fraud risk, legal risk, technology risk, information security and data privacy, business continuity, credit recovery, corporate governance, shariah compliance risk and Group ESG. It is the nerve center for collection of data, analysis of risk drivers, interpretation of outcome and its wide dissemination to relevant committees for risk management. In addition, FAB has risk team at international offices and entities in the group.

Following diagram provides Group Risk Organization Structure at FAB.

The Three Lines of Defence

The Group follows a Three lines of defence approach for managing risk. Business units and enabling functions, as the first line of defence, identify and manage risk in their day-to-day activities by ensuring that activities are within the Group's risk appetite and follow all relevant internal policies and processes. Group Credit, Group Risk, Legal and Group Compliance, as the second line of defence, establishes risk controls comprising policies and processes while also providing oversight and independent challenge to the first line of defence. The Group Chief Risk Officer ("GCRO") has a direct reporting line to the BRESGC to ensure the independence of Group Risk from Internal audit, as the third line of defence, provides assurance to management and the Board of the effectiveness of risk management practices employed by the first two lines of defence. The Group Chief Audit Officer has a direct reporting line to the Board Audit Committee.

Risk measurement systems

As a part of Pillar I risks, FAB manages its credit risk in accordance with well-established credit risk policies through regular credit reviews of customers and active monitoring of the credit portfolio. FAB manages its market risk exposures in accordance with its market risk policies and limits. The Group uses VaR limits for controlling the overall investment risk, including foreign exchange, interest rate, credit spread, equity prices and commodity prices. FAB has designed operational systems for the automation of key operational risk processes e.g., Key Risk Indicators (KRIs), Risk Control Self-assessment (RCSA) and operational risk losses.

FAB complies with the Basel Standardised approach for assessment of Risk Weighted Assets (RWA) for Credit, Market and Operational Risk and Capital requirements and maintains optimal capital adequacy as per its risk Appetite. FAB considers Credit Concentration risk, Liquidity risk, Interest rate risk, Strategic risk, Compliance risk and Reputational risk as material Pillar II risks. FAB manages credit concentration risk through diversification of lending activities and compliance with comprehensive risk appetite limits framework that have been put in place. FAB manages Liquidity & Interest Rate Risk in Banking Book (IRRBB) risk within the ambit of Asset and Liability Management (ALM) policy. FAB's exposure to interest rate risk is managed through hedging and monitoring the re-pricing of assets and

liabilities through risk management strategies. Other material risks including strategic risk, compliance risk and reputational risk, these are managed through comprehensive policies & procedures and well-established processes for assessment, monitoring and mitigation of these risks.

Risk Appetite Framework & Reporting

Risk Appetite reflects Bank's risk management philosophy and in turn influences its culture and operating style and is the cornerstone of an organization's ERM framework. The risk appetite framework for FAB has been developed with a three-tiered approach as outlined below.

The entire risk appetite framework has been designed & implemented through 3 tiered mechanism. This methodology has been approved by the GRC and the BRESGC.

Tier 1 – Group Level: Comprises of Core Metrics and Supplementary Metrics pertaining to the aggregate Risk appetite and profile at the FAB Group level.

Tier 2 - Business and Support Groups: The group level appetite is cascaded down to the individual business groups such as Investment Banking (IB), Corporate & Commercial Banking (CCB), Global Markets (GM), Consumer Banking (CB), Private Banking (PB) and Privileged Customers Group (PCG) and International-overall.

Tier 3 – Business Subunit: Risk appetite is further cascaded down one level (referred to as Tier 3) to International Locations and business sub-units or sub segments of IB, CCB, CB and PB for monitoring and managing risks at a more granular level.

Monitoring and Management of Breaches

Compliance with the Risk Appetite Framework is reported to GRC and BRESGC along with management action plans for exceptions. The risk appetite metrics and thresholds are reviewed periodically to align with the FAB's business and regulatory landscape.

Stress testing

In line with international best practices, FAB has a comprehensive stress testing framework in place, which is governed by the ICAAP Policy and Pillar II & Stress testing Methodology, approved by GRC and BRESGC. The Group conducts regular stress test exercises to assess the resilience of the group to adverse market developments under stress scenarios. The risk factors are shocked using the assumptions made under the respective scenarios and the corresponding impact on the capital adequacy is determined. The Group uses various macroeconomic and idiosyncratic stress tests in order to project capital needs and capital levels under various stress scenarios. The majority of the asset book (which includes lending and investment portfolios) as well as key risks like credit risk, market risk, operational risk, liquidity risk, interest rate risk, concentration risk etc. are covered in the stress testing exercise. The stress-testing is perceived as an important tool in internal capital planning.

FAB Group undertakes stress testing exercises as mandated by the Central bank of UAE as part of CBUAE Financial Stability Unit's (FSU) Stress testing exercise as well as part of ICAAP report on an annual basis, while the internal stress testing is conducted on a quarterly basis as well as per management requirements.

The stress test results during 2024 show that the Group has adequate capital even under adverse scenarios.

Risk Mitigation

The Group has set up a framework for credit risk mitigation as a means towards reducing credit risk in an exposure, at facility level, by a safety net of tangible and realizable securities including approved third-party guarantees/ insurance. The types of Credit Risk Mitigation ("CRM") include netting agreements, collaterals, guarantees, credit derivatives and Standby Letters of Credits ("SBLC"). The Group ensures that all documentation used in collateralised transactions and for documenting on and off-balance sheet netting, guarantees, credit derivatives and collateral is binding on all parties and is legally enforceable in all relevant jurisdictions. The Group also ensures that all the documents are reviewed by the appropriate authority and have appropriate legal opinions to verify and ensure its enforceability. Management monitors the market value of collateral on a periodic basis.

Please refer Note 50 of the Group's annual financial statements for the risk management framework.

2.3 OV1: Overview of RWA

Risk-weighted assets and capital requirements under Pillar 1

All numbers in AED million

		RWA			Minimum capital requirements		
		31-Dec-24	30-Sep-24	31-Dec-23	31-Dec-24	30-Sep-24	31-Dec-23
1	Credit risk (excluding counterparty credit risk)	525,341	521,628	486,262	55,161	54,771	51,058
2	Of which: standardised approach (SA)	525,341	521,628	486,262	-	-	-
3	Of which: foundation internal ratings-based (F-IRB) approach	-	-	-	-	-	-
4	Of which: supervisory slotting approach	-	-	-	-	-	-
5	Of which: advanced internal ratings-based (A-IRB) approach	-	-	-	-	-	-
6	Counterparty credit risk (CCR)	13,283	14,906	11,605	1,395	1,565	1,219
7	Of which: standardised approach for counterparty credit risk	13,283	14,906	11,605	-	-	-
8	Of which: Internal Model Method (IMM)	-	-	-	-	-	-
9	Of which: other CCR	-	-	-	-	-	-
10	Credit valuation adjustment (CVA)	8,354	10,254	7,630	877	1,077	801
11	Equity positions under the simple risk weight approach	-	-	-	-	-	-
12	Equity investments in funds - look-through approach	-	-	-	-	-	-
13	Equity investments in funds - mandate-based approach	8,137	8,893	6,639	854	934	697
14	Equity investments in funds - fall-back approach	-	-	-	-	-	-
15	Settlement risk	-	-	-	-	-	-
16	Securitisation exposures in the banking book	2,217	1,912	1,011	233	201	106
17	Of which: securitisation internal ratings-based approach (SEC-IRBA)	-	-	-	-	-	-
18	Of which: securitisation external ratings-based approach (SEC-ERBA)	2,217	1,912	1,011	-	-	-
19	Of which: securitisation standardised approach (SEC-SA)	-	-	-	-	-	-
20	Market risk	35,614	49,840	36,310	3,739	5,233	3,813
21	Of which: standardised approach (SA)	35,614	49,840	36,310	-	-	-
22	Of which: internal models approach (IMA)	-	-	-	-	-	-
23	Operational risk	46,629	44,605	37,992	4,896	4,684	3,989
24	Amounts below thresholds for deduction (subject to 250% risk weight)	-	-	-	-	-	-
25	**Total (1+6+10+11+12+13+14+15+16+20+23)**	**639,573**	**652,037**	**587,449**	**67,155**	**68,464**	**61,682**

Base capital requirement as per CBUAE guidelines is 10.5% for total capital adequacy ratio

The Operational Risk RWA is computed based on the 3-years average operating income of TTM

The QoQ decrease in MR RWA was mainly driven by active FX risk management together with a reduction in the General Interest rate Risk from trading activities

3. Linkages between financial statements and regulatory exposures

3.1 LI1: Differences between accounting and regulatory scopes of consolidation and mapping of financial statement categories with regulatory risk categories

Columns (a) and (b) identify the differences between the scope of accounting consolidation; and columns (c)-(g) break down how the amounts reported in banks' financial statements correspond to regulatory risk categories

9	**Exposure amounts considered for regulatory purposes**	**1,527,836**	**1,460,942**	**4,412**	**21,514**	**40,969**

3.3 LIA: Explanations of differences between accounting and regulatory exposure amounts

Credit risk exposures reported under Basel III differ in respect of the following vis-à-vis the financial statements:

- The difference between the carrying values reported in the financial statements and under the scope of regulatory consolidation primarily pertains to the deconsolidation of the commercial subsidiaries (namely FMI, ADNP and Mismak) under regulatory consolidation in accordance with the CBUAE Capital Adequacy Standards on Tier Capital Supply para 1. The investments in these entities are risk weighted in accordance with the Basel regulations and any intra group exposure to such entities are treated as third party loans for the purpose of risk weighting. The related reserves and retained earnings are deducted from the Group capital.
- Goodwill and Intangible assets, Deferred Tax Assets are deducted from Capital and not considered under credit risk framework in accordance with the CBUAE Capital Adequacy Standards on Tier Capital Supply para 46-51.
- For the purpose of capital adequacy assessment, the Bank performs prudent valuation adjustment in excess of IFRS Fair Value to address valuation risks inherent in financial instruments measured at fair value. The prudent valuation adjustment is to deduct from the CET1 Capital.
- As per CBUAE Basel III framework, off balance sheet exposures are converted, by applying a credit conversion factor (CCF), into equivalent credit exposures in accordance with the CBUAE Capital Adequacy Standards on Credit Risk para 44-48.
- Acceptances reported under Other assets in financial statements are considered as off-balance sheet exposures with 100% CCF for capital requirements calculations purpose in accordance with the CBUAE Capital Adequacy Standards on Credit Risk para 45(i).
- The Credit equivalent amount for derivatives is computed based on the Standardised approach for Counterparty Credit Risk wherein the Bank calculates EAD separately for each netting set, as the sum of the Replacement Cost (RC) of the netting set plus the calculated Potential Future Exposure (PFE) for the netting set, with the sum of the two multiplied by a factor of 1.4 in accordance with the CBUAE Capital Adequacy Standards on Counterparty Credit Risk para 8-11.
- Collective provisions are not netted off against the credit exposures but instead included in the Group's Tier 2 capital, capped at 1.25% of the Credit RWA in accordance with the CBUAE Capital Adequacy Standards on Tier Capital Supply para 31.
- Private equity exposures/commitments reported under FVTPL investments/Contingent assets in the financial statements are treated as Equity Investment in Funds for the purpose of capital calculations in accordance with the CBUAE Capital Adequacy Standards on Equity Investments in Funds and also certain strategic investments under FVTPL investments are considered as Equity investment in Banking book since they don't meet the Basel criteria for trading book exposures. Under the comprehensive credit risk mitigation approach, eligible collaterals are considered subject to regulatory haircuts to estimate and report net exposure in accordance with the CBUAE Capital Adequacy Standards on Credit Risk section IV.

4. Prudent valuation adjustments

For the purpose of capital adequacy assessment, the Bank performs prudent valuation adjustment in excess of IFRS Fair Value to address valuation risks inherent in financial instruments measured at fair value, which cover the following asset classes: Interest Rate, FX, Credit, Equity and Commodity. The prudent valuation adjustment is to deduct from the Common Equity Tier 1 Capital.

In the table below, the adjustment split has been provided between banking book and trading book as well as breakdown by asset class in proportion to the contributing risks.

All numbers in AED million

	31-Dec-24	Equity	Interest rates	FX	Credit	Commodities	Total	Of which: In the trading book	Of which: In the banking book
1	Closeout uncertainty, of which:	-	-	-	-	-	-	-	-
2	*Mid-market value*	-	-	-	-	-	-	-	-
3	Closeout cost	-	-	-	-	-	-	-	-

12	Total adjustment	**28**	**58**	**13**	**95**	**1**	**194**	**87**	**107**

- As per the Market Risk standard Appendix VII from CBUAE Capital adequacy standards: Prudent Valuation Guidance, para 96 states Banks should apply prudent valuation practices for the trading book. The primary purpose of regulatory Prudent Valuation Guidance (PVG) is to ensure that prudent valuation policies and procedures, which are the foundation upon which robust assessment of capital adequacy should be built, are adhered to at all times by banks for regulatory capital purposes.
- Currently FAB has relatively small fair value positions dominated by vanilla products that are subject to limited valuation uncertainties and will least likely affect capital adequacy in any material way, so the Bank applies a simpler approach on a Group consolidated basis, similar to EBA Simplified Approach, to estimate the Additional Valuation Adjustments (AVAs). In the long term, depending on CBUAE release of prudent valuation technical standards FAB will review the current approach and align to CBUAE standards to ensure the target prudence level of valuation certainty being achieved.

6. Macroprudential Supervisory measures

6.1 CCyB1: Countercyclical Buffer

The Bank's countercyclical capital buffer (CCyB) requirement reflects the geographic composition of its portfolio of private credit exposures by applying country specific CCyB rates to the qualifying credit exposures in the relevant country on a weighted average basis in accordance with the CBUAE Capital Adequacy Standards on Tier Capital Supply para 15.

All numbers in AED million

27	Applicable leverage buffers	0.50%	0.50%	0.50%

[1]CCR exposure for Derivatives transactions (calculated as 1.4 x (Row 8 + 9) taken into consideration.

FAB Group subsidiaries 'MISMAK', 'First Merchant International' and 'Abu Dhabi National Prop.' have been deconsolidated.

8. Liquidity

8.1 LIQA: Liquidity risk management

(a) **Overview and Governance of liquidity risk management.**

Liquidity risk is the risk of the Group not being able to generate sufficient cash flow at reasonable cost to meet expected and / or unexpected claims.

The Group Board of Directors (BOD) has the overall responsibility for ensuring that the liquidity risk of the FAB group is effectively managed. The BOD authorizes the Board Risk and ESG Committee (BRESGC) to have effective oversight and control of liquidity risk. The BRESGC is responsible for defining the Liquidity Risk Appetite at the Group level and is set at a level to ensure compliance with extant local and Basel regulations and consistent with business strategy, risk capacity and liquidity / funding plans. BRESGC has delegated discretionary powers to the GALCO for ongoing liquidity risk management.

The liquidity risk strategy of the bank is to ensure that the Group remains adequately liquid by always ensuring a sustainable balance of liquid assets to meet expected and contingent outflows. This is done through adherence with Basel III guidelines on LCR and NSFR. In addition, the Bank also manages liquidity risk through a range of internal measures like cash flow mismatches, concentrations, diversified funding sources etc.

(b) **Funding strategy**

Bank's funding strategy is developed with the objective to maintain adequate liquidity buffers for liquidity management, ensure appropriate diversification of funding sources, maintain suitable lines of credit with other institutions, in order to mitigate reliance on volatile funding sources during stressed market conditions, ensure adherence to all statutory, regulatory and internal limits, support the growth and sustainability of the Bank, in line with projections and budgets, managing funding cost et.al.
It ensures that there is diversification across funding products and counterparty types.

(c) **Liquidity risk mitigation techniques**

Bank maintains adequate amount of High-Quality Liquid Assets (HQLA) to be able to meet its financial obligations under normal and stressed scenarios. Bank actively manages its market access, through strong relationships with both local and international market participants which can serve as a dependable funding source. Bank focuses on diversifying its funding sources and maintains ongoing relationship with key clients to manage its liquidity effectively.

(d) **Stress testing**

Stress testing is an integral part of Bank's liquidity risk management framework and is used to evaluate potential vulnerability to survive liquidity stress events. Stress testing provides forward looking assessments of risk, alerting the Bank to adverse unexpected outcomes related to a variety of severe but plausible shock scenarios – both idiosyncratic and systemic. Stress testing identifies key risk drivers that the group is exposed to and provides an indication of the level of liquid asset buffers that the Bank needs to hold if large shocks were to occur. The stress test is performed quarterly and the results are presented to GALCO.

(e) **Bank's contingency funding plans**

Bank's Contingency Funding Plan (CFP) is an essential tool to provide Early Warnings Indicators (EWI) of a potential stress event, thereby allowing the Bank sufficient time to take remedial actions to protect itself against liquidity risks. CFP clearly assigns roles and responsibilities to key individuals as well as defining procedures that should be followed in the event of a stress event. Thus, CFP ensures that FAB can continue to honour all its obligations and commitments, while also providing ongoing financial support and liquidity to its customers. EWI's are measured and reported to senior management frequently, additionally EWI's are assessed for their appropriateness and effectiveness on a regular basis.

(f) **Customised measurement tools or metrics** that assess the structure of the bank's balance sheet or that project cash flows and future liquidity positions, taking into account off-balance sheet risks which are specific to the bank.

Apart from the regulatory liquidity metrics that FAB complies to, FAB uses a number of internal metrics to manage its liquidity positions. Some of the metrics are liquidity gaps measured using maturity mismatch reports, intraday liquidity ratios, short/long term capital market funding

ratios to ensure efficient funding mix, Max bucketed long term funding ratio to avoid cliff effect on account of significant long term funding maturing in any given year.

(g) **Concentration limits on collateral pools and sources of funding** (both products and counterparties)

Bank has set concentration limits on its different funding sources e.g.: Customer deposits, capital market funds, secured and unsecured money market borrowings et.al.

(h) **Liquidity exposures and funding needs** at the level of individual legal entities, foreign branches and subsidiaries, taking into account legal, regulatory and operational limitations on the transferability of capital.

Group operates with a requirement that all individual legal entities, foreign branches and subsidiaries are self-sufficient on their own funding needs. While all individual legal entities, foreign branches and subsidiaries endeavour to comply with this requirement, any shortfall in funding is implicitly guaranteed to be bridged by UAE entity as part of wider Group responsibilities. The intra group funding is managed within the ambit of local as well as parent regulations. Each centre regularly monitors and reports its liquidity position to the local senior management through its own ALCO and the HO.

(i) **Balance sheet and off-balance sheet items** broken down into maturity buckets and the resultant liquidity gaps.

Reported in 50(b) liquidity risk section of the annual report

8.2 LIQ1: Liquidity Coverage Ratio (LCR)

Liquidity Coverage Ratio (LCR) is a Basel III liquidity requirement. LCR's objective is to promote the short-term resilience of the bank's liquidity risk profile, by ensuring that banks have an adequate stock of unencumbered high-quality liquid assets (HQLA) to meet the liquidity needs for a 30-calendar day liquidity stress scenario. Basel III accord requires that banks maintain a minimum LCR of 100%. The ratio is calculated on FAB group level basis and is being used for regulatory reporting.

19	**Other cash inflows**	**11,953**	**11,953**	**10,627**	**10,627**
20	**TOTAL CASH INFLOWS**		**53,147**		**50,029**
			Total adjusted value		**Total adjusted value**
21	**Total HQLA**		**377,039**		**413,873**
22	**Total net cash outflows**		**264,384**		**287,926**
23	**Liquidity coverage ratio (%)**		**142.60%**		**143.68%**

Note : The number is average of three month end data points.

The main drivers for Bank's high LCR is significant investment in HQLA comprising cash and bank balances (Level 1) and liquid investments mostly in level 2A. The composition of HQLA is given in Table below

All numbers in AED million

	31-Dec-24	30-Sep-24
Level 1	333,538	362,993
Level 2A	32,777	42,118
Level 2B	10,725	8,762

Level 1 assets which are regarded as having the highest market liquidity (0% haircut in LCR) comprises more than 88% of the total HQLA. This ensures that the Bank is resilient to even severe disruption of market liquidity.

FAB has consistently maintained a robust LCR with significant buffers over the regulatory minima as evident from the exhibit below showing the evolution since Dec 23

All numbers in AED million

	31-Dec-24	30-Sep-24	30-Jun-24	31-Mar-24	31-Dec-23
Total HQLA	377,039	413,873	384,794	420,020	382,470
Total net cash outflow	264,384	287,926	250,660	273,868	259,483
LCR ratio (%)	142.60%	143.68%	153.52%	153.41%	147.39%

The main reason for the high LCR is the Bank's conscious strategy to preserve liquidity in the form of freely repatriable Central Bank placements at overnight notice.

8.3 LIQ2: Net Stable Funding Ratio (NSFR)

Net Stable Funding Ratio (NSFR) is Basel III liquidity requirement. NSFR requires banks to maintain a stable funding profile in relation to the composition of their assets and off-balance sheet activities. Basel III accord requires that banks maintain a minimum NSFR of 100%. The ratio is calculated on FAB group level basis and is being used for regulatory reporting.

33	***Total RSF***					**609,238**					**587,919**
34	***Net Stable Funding Ratio (%)***					**105.17%**					**107.88%**

* Items to be reported in the "no maturity" time bucket do not have a stated maturity. These may include, but are not limited to, items such as capital with perpetual maturity, non-maturity deposits, short positions, open maturity positions, non-HQLA equities and physical traded commodities.
NSFR Ratio computed for the calculation period is based on the ratio of average ASF over average RSF.

All numbers in AED million

	31-Dec-24	30-Sep-24	30-Jun-24	31-Mar-24	31-Dec-23
Total available stable funding	640,742	634,224	623,985	614,695	584,881
Total required stable funding	609,238	587,919	574,649	575,263	553,832
NSFR ratio (%)	105.17%	107.88%	108.59%	106.85%	105.61%

Bank consistently maintains its NSFR above the regulatory minima as evidenced by the NSFR evolution in the table above. FAB constantly strives to better its NSFR by managing a stable and efficient funding mix which is driven by the characteristics of its assets and off-balance sheet items including greater impetus to increase stable retail deposits.

Bank's major source of available stable funding is driven by its capital market funding and diversified customer deposit base, while the major consumption of its required stable funding is from its performing loans and investments held in its book.

In the calculation of NSFR, the bank does not identify any asset/liability as interdependent.

9. Credit risk

9.1 CRA: General qualitative information about credit risk

Definition

Credit risk is the risk that a customer or counterparty to a financial asset fails to meet its contractual obligations and cause the Group to incur a financial loss. It arises principally from the Group's loans, advances and Islamic financing, due from banks and financial institutions, reverse repurchase agreements and non-trading debt investments, derivative financial instruments and certain other assets.

FAB's approach to management of credit risk

Credit Risk Strategy & Appetite

Credit risk strategy complements FAB Group's business strategy, ensuring that a prudent credit risk profile is maintained at all times. FAB Group operates within a sound and well-defined criterion to ensure that an appropriate risk-return discipline is maintained. Due consideration is given to potential future changes in economic conditions and credit risk portfolio is subject to appropriate stress testing standards. Overall, credit limits are established at the level of individual counterparties, groups of connected counterparties, geographical regions, industries, sectors and other risk dimensions.

Credit risk appetite is articulated at the Group level as part of Risk Appetite Framework (RAF) and cascaded down to the segments which are in alignment with the way the Group conducts its business and support activities. All the key stakeholders including Business Functions, Control Functions (Credit and Risk) are included in the development process to ensure that the credit risk appetite is developed in alignment with the business strategy and intended risk profile and applicable regulatory requirements.

Identification and assessment

Credit risk identification and assessment at FAB Group is carried out through a comprehensive mechanism comprising three levels of defence. The first level of defence lies with the business units and is responsible for maintaining a sound credit quality of Assets in line with the approved business strategy and credit risk appetite. The second level of defence is with the Group Credit Unit that assesses the risk on a customer and facility level and ensures proper documentation of customer, facility and security documents along with Group Risk management unit that assesses credit risk on a portfolio basis and maintains credit risk policies and credit risk rating models up to date. Internal Audit acts as a third level of defence with regular reviews of credit analysis and the risk functions to check the compliance with policies and procedures of the Group. The unit also reviews the policy documents on a regular basis.

Mitigation

The Group has set up a framework for credit risk mitigation as a means towards reducing credit risk in an exposure, at facility level, by a safety net of tangible and realizable securities including approved third-party guarantees/ insurance. The types of Credit Risk Mitigation (CRM) include netting agreements, collaterals, guarantees, credit derivatives and Stand by Letter of Credit (SBLC). The Group ensures that all documentation used in collateralised transactions and for documenting on and off-balance sheet netting, guarantees, credit derivatives and collateral is binding on all parties and is legally enforceable in all relevant jurisdictions. The Group also ensures that all the documents are reviewed by appropriate authority and have appropriate legal opinions to verify and ensure its enforceability.

Monitoring and Reporting

As a part of credit risk monitoring and control framework, regular risk monitoring at both individual and portfolio levels is carried out along several parameters which include credit quality, provisioning levels, exposure limits across several dimensions, financial and operating performance, account conduct, end use of funds, adequacy of credit risk mitigants, adherence to financial and non-financial covenants, recovery performance, rating system performance among others.

9.2 CR1: Credit quality of assets

Below tables provide a snapshot of the Group's credit quality for its on and off-balance sheet exposures.

All numbers in AED million

9.3 CR2: Changes in stock of defaulted loans and debt securities

Below table showcases the changes in stock of defaulted loans and debt securities

		All numbers in AED million	
		31-Dec-24	31-Dec-23
1	**Defaulted loans and debt securities at the end of the previous reporting period**	**26,810**	**24,768**
2	Loans and debt securities that have defaulted since the last reporting period	6,092	8,128
3	Returned to non-default status	-1,567	-1,148
4	Amounts written off	-4,105	-3,502
5	Other changes	-889	-1,436
6	**Defaulted loans and debt securities at the end of the reporting period (1+2-3-4±5)**	**26,341**	**26,810**

Note: Reported values are Gross of IIS loans exposure; aligned with 'Carrying Value' reported under CR1.s
Other changes represents recoveries/reduction in the exposure of the defaulted loans present at the end of the previous reporting period.

9.4 CRB: Additional disclosure related to the credit quality of assets

Definition of default

Pursuant to the release of the Credit Risk Management Standards (CRMS) in November 2024, FAB follows the new guidelines for classification of assets. The new standards replace the erstwhile regulations enumerated in the CBUAE Circular 28/2010. In addition, FAB has a well-defined, documented and approved process based on which loans are classified.

The standards define criteria to identify default via (a) Non-payment and/or (b) Unlikeliness to Pay and applies to both the retail and non-retail segments.

A default is considered to have occurred when the obligor is past-due for more than 90 days on any material credit obligation or FAB Group considers that the obligor is unlikely to pay its credit obligations to itself in full.

Impairment

The Group incorporates forward-looking information into the assessment of the credit risk of an instrument has increased significantly since its initial recognition and the measurement of Expected Credit Loss (ECL). The Group has identified and documented key drivers of credit risk and credit losses for each portfolio of financial instruments and, using an analysis of historical data, has estimated relationships between macro-economic variables and credit risk and credit losses.

The Bank recognizes loss allowances for Expected Credit Loss (ECL) on the following financial instruments that are not measured at fair value through profit or loss (FVTPL):

- balances with central banks
- due from banks and financial institutions
- Reverse repurchase agreements
- Financial assets that are debt instruments
- Loans, advances and Islamic financing
- Loan commitments issued and
- Financial guarantee contracts issued

The Group measures loss allowances at an amount equal to lifetime ECL, except for debt investment securities that are determined to have low credit risk other financial instruments on which credit risk has not increased significantly since their initial recognition, which are measured as 12-month ECL.

Credit loss allowances are measured using a three-stage approach based on the extent of credit deterioration since origination:

Stage 1 – Where there has not been a significant increase in credit risk ("SICR") since initial recognition of a financial instrument, an amount equal to 12 months expected credit loss is recorded. The expected credit loss is computed using a probability of default occurring over the next 12 months. For those instruments with a remaining maturity of less than 12 months, a probability of default corresponding to remaining term to maturity is used.

Stage 2 – When a financial instrument experiences an increase in credit risk, but is however not considered to be impaired, it is classified under Stage 2. The triggers include quantitative & qualitative indicators and forward-looking information that determine SICR (Significant Increase in Credit Risk). This requires the computation of expected credit loss based on the probability of default over the remaining estimated life of the financial instrument.

Stage 3 – Financial instruments that are considered to be impaired are included in this stage. Similar to Stage 2, the allowance for credit losses captures the lifetime expected credit losses.
The measurement of impairment losses across all categories of financial assets requires the calculation of the amount and timing of future cash flows and collateral values and the assessment of a significant increase in credit risk. These are driven by a number of factors, changes in which can result in different levels of allowances. The Bank's ECL calculations are outputs of complex models with a number of underlying assumptions regarding the choice of variable inputs and their interdependencies.

Distressed and Non-Distressed Restructuring of Credit facilities

Credit facilities may sometimes require restructuring due to commercial or credit stress related reasons. The rationale to consider a restructuring of a facility is to prevent the obligor from turning into an NPA especially if the obligor is otherwise sound and capable of meeting commitments.

A restructured credit facility is considered as “Distressed” if any of its terms have been changed due to financial difficulties in repayment including facilities that are already past due for more than 90 days.

Non-Distressed restructuring refers to the modification of the credit facility terms for commercial or regulatory reasons or for the purpose of reducing any potential increase in credit risk.

9.4.1 Gross Credit Exposure by Geographical Distribution

9.5 CRC: Qualitative disclosure requirements related to credit risk mitigation techniques

Credit Risk Mitigation

Credit Risk Mitigation (CRM) is a method of reducing credit risk in an exposure, at facility level, by a safety net of realizable securities including approved third-party guarantees/ insurance. Such mitigants would compensate FAB Group in the event of a credit risk related loss.

The following are the types of CRMs acceptable to FAB Group:
1) Collateral
2) Guarantees
3) Standby Letters of Credit (SBLC)
4) On-balance sheet netting
5) Credit derivatives

Collateral

The bank has in place a system of controls, reviews and approvals to ensure effective collateral management. This includes minimum collateral coverage or loan to value requirement for each facility, specific collateral requirements for lending to specific portfolios, margin calls for treasury products and ensuring legal enforceability of collaterals or contracts including perfection of security interests.

FAB Group Credit policy enumerates the detailed criteria to assess the eligibility of collaterals. Following is the indicative list of assets/ instruments which are eligible to be treated as collateral.

- Cash on deposit (domestic and foreign currency) with FAB Group including certificates of deposit or comparable instruments
- Certificates of Deposit from other banks, with FAB Group lien recorded
- Commodities (preferably exchange traded), where permitted and where FAB Group has the necessary expertise to handle the same
- Debt securities issued by sovereigns and public-sector enterprises
- Debt securities issued by banks or corporates
- Equities
- Collective investment schemes or mutual funds
- Mortgages/Pledges on real estate
- Asset-backed securities

FAB Group ensures that there are no major concentration risks due to the collateral accepted

Valuation of Collateral

Periodic valuation of the collateral helps FAB Group accurately understand the degree to which the collateral provided by the obligor mitigates the credit risk of the facility on an on-going basis. The Group adheres to the following policies for collateral valuation:

- All collateral accepted by FAB Group are re-valued periodically so as to assess the extent to which the collateral mitigates the credit risk. The valuation methodology and frequency of revaluation depends on the type and nature of collateral (and the underlying asset classification of the facility). For exposures classified as non-performing or Stage 3, valuation and inspection may be done more frequently in line with the regulatory guidelines.
- Valuation must be through any of the Bank's empanelled valuation companies and through a fair distribution logic taking into account expertise, service quality and business requirements.
- Valuation agencies to ensure that all properties are valued at "Market Value" and in accordance with the Royal Institution of Chartered Surveyors (RICS) valuation global standards.
- The bank has established minimum standards to on-board external evaluators and surveyors to ensure standardised valuation methodologies, report templates, valuation fees and process.
- FAB Group computes haircuts associated with different types of collateral that are permitted for credit risk mitigation in line with the regulatory guidelines.

Guarantees

Guarantees given on behalf of obligor must represent a direct claim on the guarantor and must be explicitly referenced to specific exposures. To be acceptable to FAB, the guarantee must have the following key characteristics:

- The risk rating of the guarantor should ideally be better than that of the obligor/counterparty whose exposure is guaranteed
- Guarantees issued should be binding on all parties and legally enforceable in all relevant jurisdictions.
- A guarantee should represent a direct claim on the guarantor once the obligor/counterparty has defaulted and must be explicitly referenced to specific exposures or a pool of exposures, so that the extent of the cover is clearly defined and incontrovertible
- Guarantee contracts should be irrevocable
- The creditworthiness of the guarantor should not normally be correlated or linked to the financial position of the obligor
- The guarantee should remain continuously effective until the facility or facilities covered by the guarantee is fully repaid or settled
- All guarantees must contain indemnity wording, so that if the primary obligations of the obligor fall away, the guarantor would allow FAB Group to be indemnified (i.e., the guarantee still remains valid, the enforceability of the underlying facility or transaction notwithstanding).

Standby Letter of Credit

FAB also accepts Standby Letter of Credit (SBLC) issued subject to Uniform Customs and Practices for Documentary Credits (UCP 500/ or any revised version like UCP 600) and International Standby Practices (ISP 98 or any revised versions), as Credit Risk Mitigation method.

Netting

On-balance Sheet Netting: On-balance sheet netting is considered only for legally enforceable netting arrangements for loans and deposits, where there is a well-founded legal basis for concluding that the netting or offsetting agreement is enforceable.

Off-balance Sheet Netting: FAB Group may net transactions subject to novation under which any obligation between FAB Group and its counterparty to deliver a given currency on a given value date is automatically amalgamated with all other obligations for the same currency and value date, legally substituting one single amount for the previous gross obligations.

Following transactions/instruments are eligible for off- and on-balance sheet netting provided the netting eligibility conditions have been met:

- Mutual claims between FAB Group and the obligor/counterparty
- Reciprocal cash balances between FAB Group and the counterparty
- Repurchase transactions
- Securities or commodities lending or borrowing transactions
- Other capital market-driven transactions with a counterparty
- Forwards, swaps, options and other derivative instruments.

Derivatives

Credit derivatives are financial contracts designed to transfer credit risk on loans and advances, investments and other assets/ exposures from one party (protection buyer) to another party (protection seller). Transfer of credit risk may be for the whole life of the underlying asset or for a shorter period. The transfer may be for the entire amount of the underlying asset or for a part of it.

A credit derivative may be referenced to a single entity or to a basket of several entities. Credit derivatives may also include cash instruments (e.g., credit linked notes) where repayment of principal is linked to the credit standing of a reference asset/entity.

Eligible types of Credit Derivatives

The credit derivatives can be broadly classified under the following four types and may range from plain vanilla to complex structures that may involve any combination of two or more of the following structures:

- Credit Default Swaps (CDSs)
- Total Return Swaps (TRSs)
- Credit Linked Notes (CLNs)
- Credit options

9.7 CRD: Qualitative disclosures on banks' use of external credit ratings under the standardised approach for credit risk

In determining the risk weights in the standardised approach, FAB uses assessments by external credit assessment institutions recognised as eligible for capital purposes by the Central Bank of the UAE in accordance with the criteria defined in the Guidance on Recognition of External Credit Assessment Institutions (ECAI).

In accordance with CBUAE Basel III guidelines, FAB uses Credit Ratings assigned by Fitch, Moody's and Standard and Poor's (S&P) for determining the risk weights of Sovereigns, Public Sector Entities, Multilateral Development Banks, Banks and Securities Firms and Corporate exposures.

The bank follows the "Second-Best Approach" when applying a rating to a counterparty as it enables consistent ratings view across the portfolio. In the case of Bonds / Equities, bank takes the Bloomberg ISIN's Issue Rating into consideration for the calculation methodology, else Issuer rating is used. Standardised approach risk weights corresponding to the Credit Ratings assigned by these ECAIs have been prescribed by CBUAE for different asset classes as follows:

Sovereigns: The UAE Sovereign asset class consists of exposures to Federal and Emirates governments. The Federal Government includes all the UAE Federal entities and Central Bank of the UAE. Emirates Governments' exposures include exposures to the Ruler and the Crown Prince of each emirate, as well as exposures to the ministries, municipalities, and other Emirates government departments which receive 0% risk weight along with exposures to other GCC sovereigns and their central banks if the exposures are denominated and funded in the domestic currency of that sovereign and the Supervisory authority of that sovereign has adopted such preferential treatment. Exposures in currencies other than AED or USD and claims on other sovereigns and central banks that do not meet above criteria are risk weighted as per table provided.

Banks: A bank exposure is defined as a claim on any financial institution that is licensed to take deposits from the public and is subject to appropriate prudential standards and level of supervision. No claim on an unrated bank receives a risk weight lower than that applied to claims on its sovereign of incorporation.

Security Firms: Exposures to security firms are treated as claims on banks if these firms are subject to prudential standards and a level of supervision that is equivalent to those applicable to banks. Otherwise, such claims follow the rules for claims on corporates.

MDBs: Exposures to Multilateral Development Banks (MDBs) are treated similar to claim on banks, but without using the preferential treatment for short term claims. However, highly rated MDBs, approved by Basel/CBUAE, are eligible for a preferential 0% risk weight.

Corporates: Claims on corporates to be risk- weighted based on the entity's external credit rating assessment based on below table.

Government Related Entities (GREs) / Public Sector Entities (PSEs): PSEs include the following categories:

(i) Non-Commercial PSEs; and
(ii) Other PSEs including commercial PSEs (Government Related Entity GRE) i.e., commercial PSEs that are fully owned or more than 50% in ownership by the UAE government).

Non-Commercial PSEs that are acknowledged by the Central Bank of the UAE are treated as Claims on Bank (long term). The Central Bank issues a GRE list to banks on a regular basis that the CBUAE considers Non-Commercial PSEs that qualify for this treatment. Exposure to all other PSEs that are not included on the CBUAE's list are treated like exposures to corporates.

Alphanumerical scale of each of the Rating Agency along with respective risk buckets is showcased in below table:

Assessments			Risk Weights				
					Banks		
S&P / FITCH	MOODY'S	CAPITAL INTELLIGENCE	Sovereign	MDB / PSE	Mat. > 3 months	Mat. ≤ 3 months *(Domestic currency only)*	Corporate / GREs
AAA to AA-	Aaa to Aa3	AAA	0%	20%	20%	20%	20%
A+ to A-	A1 to A3	AA to A	20%	50%	50%	20%	50%
BBB+ to BBB-	Baa1 to Baa3	BBB	50%	50%	50%	20%	100%
BB+ to BB-	Ba1 to Ba3	BB	100%	100%	100%	50%	100%
B+ to B-	B1 to B3	B	100%	100%	100%	50%	150%
CCC+ and below	Caa1 and below	C and below	150%	150%	150%	150%	150%
Unrated	Unrated	Unrated	100%	50%	50%	20%	100%

9.8 CR4: Standardised approach - credit risk exposure and Credit Risk Mitigation (CRM) effects

Below table provides a snapshot of CRM impact on capital calculations by Asset classes

All numbers in AED million

	31-Dec-24	Exposures before CCF and CRM		Exposures post-CCF and CRM		RWA and RWA density	
	Asset classes	On-balance sheet amount	Off-balance sheet amount	On-balance sheet amount	Off-balance sheet amount	RWA	RWA density
1	Sovereigns and their central banks	416,655	91,978	416,655	5,402	44,192	10.5%
2	Public Sector Entities	74,008	66,335	73,645	21,176	54,708	57.7%
3	Multilateral development banks	5,324	49	4,399	49	1,766	39.7%
4	Banks	134,730	38,808	60,400	27,296	48,682	55.5%
5	Securities firms	21,381	1,512	8,584	1,353	7,820	78.7%
6	Corporates	229,924	227,576	167,353	73,689	218,007	90.4%
7	Regulatory retail portfolios	48,506	17,050	41,941	752	35,958	84.2%

10. Counterparty credit risk

10.1 CCRA: Qualitative disclosure related to counterparty credit risk

Counterparty credit risk (CCR) is the risk that the bank's counterparty to a derivative transaction could default before the final settlement of the transaction's cash flows and bank will incur loss if the transaction has a positive economic value at the time of counterparty default. CCR is managed through limit framework put in place for both Pre Settlement risk (PSR) and Settlement Risk (SR).

Bank uses SACCR method for capital estimation for CCR, where Exposure at Default (EAD) is calculated as sum of Replacement Cost (RC) & Potential Future Exposure (PFE) multiplied by regulatory defined multiplier. RC estimates current replacement cost of the derivatives transaction considering current market value, netting and margining agreements in place. PFE estimates future exposure and calculated as notional multiplied by regulatory defined add-on, the size of the add-on depends on the trade remaining maturity and the underlying asset.

Bank policies are in place to reduce CCR risk by having International Swaps and Derivatives Association (ISDA) Master Agreement and Credit Support Annex (CSA) or equivalent agreements in place with as many counterparties as possible; the Bank prefers to deal with counterparties through a clearing house to minimize CCR. Counterparty limits are in place for all derivatives counterparties and limits are set considering counterparty risk profile.

Wrong Way Risk (WWR) arises when the exposure to one counterparty during the life of a transaction is adversely correlated to the counterparty's creditworthiness. This may be either due to the nature of the transaction itself (specific WWR) or to the market / macroeconomic factors that may affect the transaction or the counterparty or the counterparty sector in an unfavorable way (general WWR). WWR is identified and estimated to monitor CCR exposures.

Impact of the Bank's rating downgrade on collateral requirements is not material as collateral agreements are generally not linked to Bank's rating.

10.2 CCR1: Analysis of counterparty credit risk (CCR) exposure by approach

Below table provides a snapshot of regulatory requirements and main drivers for CCR

All numbers in AED million

	31-Dec-24	Replacement cost	Potential future exposure	EEPE	Alpha used for computing regulatory EAD	EAD post-CRM	RWA
1	SA-CCR (for derivatives)	3,383	13,074	-	1.4	23,041	13,283
2	Internal Model Method (for derivatives and SFTs)	-	-	-	-	-	-
3	Simple Approach for credit risk mitigation (for SFTs)	-	-	-	-	-	-
4	Comprehensive Approach for credit risk mitigation (for SFTs)*	-	-	-	-	13,886	10,476
5	VaR for SFTs	-	-	-	-	-	
6	**Total**	**-**	**-**	**-**	**-**	**-**	**23,758**

** Includes the Repurchase agreements and Reverse repurchase agreements exposures / RWA*

	31-Dec-23	Replacement cost	Potential future exposure	EEPE	Alpha used for computing regulatory EAD	EAD post-CRM	RWA
1	SA-CCR (for derivatives)	4,064	11,303	-	1.4	21,514	11,605
2	Internal Model Method (for derivatives and SFTs)	-	-	-	-	-	-

10.3 CCR2: Credit valuation adjustment (CVA) capital charge

Below table provides the CVA regulatory calculations (standardised approach)

All numbers in AED million

	31-Dec-24		31-Dec-23	
	EAD post-CRM	RWA	EAD post-CRM	RWA
All portfolios subject to the Standardised CVA capital charge*	21,117	8,354	20,773	7,630

*all securities financing transactions (SFTs) that are subject to fair-value accounting and except those transacted directly with a central counterparty

EAD post-CRM: exposure at default. This refers to the amount used for the capital requirements calculation. It is therefore the amount of the credit valuation adjustments having applied the CRM techniques.

10.4 CCR3: Standardised approach - CCR exposures by regulatory portfolio and risk weights

Below table provides a snapshot of CCR Exposure split by Asset class and Risk Weights

All numbers in AED million

31-Dec-24 Regulatory Portfolio \ Risk weight	0%	20%	50%	75%	100%	150%	Others	Total credit exposure

18	Non-segregated initial margin	-	-	-	-
19	Pre-funded default fund contributions	-	-	-	-
20	Unfunded default fund contributions	-	-	-	-

11. Securitisation

The Capital Adequacy Framework standards define certain activities as securitisation transactions which attract capital requirements in accordance with the Securitisation Framework. FAB has a few positions that meet the regulatory definition of a securitisation and are in its banking book. FAB currently has positions as an investor only and not as an originator or sponsor. As per CBUAE framework, regulatory capital is required for banks' securitisation exposures, including those arising from the provision of credit risk mitigants to a securitisation transaction, investments in asset-backed securities, retention of subordinate tranches, and extension of liquidity facilities or credit enhancements.

As per the CBUAE framework securitisation exposures are to be risk-weighted under one of two available approaches for securitisation, the Securitisation External Ratings-Based Approach (SEC-ERBA) or the Standardised Approach (SEC-SA). A bank must use SEC-ERBA if the exposure has an external credit assessment that meets the operational requirements for an external credit assessment, or an inferred rating that meets the operational requirements for inferred ratings. If a bank cannot use the SEC-ERBA, the bank must use the SEC-SA. Banks that are unable to apply either approach a securitisation exposure must assign such an exposure a risk weight of 1250%. FAB currently uses the SEC-ERBA for its exposures. To use the SEC-ERBA FAB only uses external credit assessments from eligible external credit assessment institutions (ECAI) approved by CBUAE.

11.2 SEC1: Securitisation exposures in the banking book

Below table provides a snapshot of Group Securitisation exposures in the banking book, split by Asset class

All numbers in AED millions

12. Market risk

12.1 MRA: General qualitative disclosure requirements related to market risk

Market Risk Overview

Market risk is the risk that the Group's income or capital will fluctuate on account of changes in the value of a financial instrument because of movements in market factors such as interest rates, credit spreads, foreign exchange rates and market prices of equity and commodity.

Market risk is managed through an effective control framework with 3 levels of defence. The first level is the Global Markets Group (GM) and Group Treasury (GT), the second level of defence is the Group Market & Liquidity Risk (GMLR) that establishes a comprehensive limit structure including exposure limits, sensitivities (risk limits) as well as Management Action Triggers (MATs). Group Internal Audit (GIA) forms the third level of defence and reviews the GM, GT & the GMLR on a regular basis for all their functions to check the compliance with documented policies & also check whether the policies are up to date.

The Group separates its exposure to market risk between trading, investment, and non-trading portfolios. Trading and investment portfolios are held by the Global Markets Division and are managed on a fair value basis.

Investment Management Committee ("IMCO") is responsible for oversight and guidance to Global Markets' trading and investment activities. It ensures effective management of market risks in accordance with the principles laid down in the market risk management policy. IMCO acts as a sub-committee of Group Asset and Liabilities ("G-ALCO") which has the overall authority and responsibility to manage market risks.

Market Risk Group is responsible for the development and implementation of detailed market risk appetite, risk management methodologies and policies including the control framework that is reviewed by IMCO and submitted to G-ALCO and BRESGC for approval.

Exposure to market risks

Market risk exposure within the Group's trading portfolios comprises mainly of investments at fair value through profit or loss and trading derivatives. Exposure to Market Risk in the banking portfolios mainly comprises of non-trading investments, reverse repurchase agreements and certain derivative instruments which are designated as hedging instruments. Overall, the market risk exposure arises primarily from the investment portfolios, interest rate gaps in the banking book and the Group's overall FX positions.

The principal analytical tool used to measure and control market risk exposure within the Group's trading portfolios which comprise of investments at fair value through profit or loss and trading derivatives is Value at Risk ("VaR"). The VaR of a trading portfolio is the estimated loss that will arise on the portfolio over a specified period of time (holding period) from an adverse market movement with a specified probability (confidence level). The VaR model uses historical simulations based on a 99% confidence level and assumes a 1-day holding period. Using market data from the previous 12 months, and observed relationships between different markets and prices, the model generates a wide range of plausible future scenarios for market price movements. The historical market rates and prices cover the risk factors associated with the following asset classes: foreign exchange, interest rates, credit, commodities and public equity.

The Group has established VaR limits covering all trading desks. The overall structure of Trading and Banking book VaR limits is subject to review by the IMCO and G-ALCO prior to final approval by the Board. VaR limits are then cascaded down to respective desks. VaR is driven by actual historical observations and hence, it is not an estimate of the maximum loss that the Group could experience from an extreme market event. As a result of this limitation, the VaR is further supplemented with other sensitivity limit structures and risk measures including stressed VaR (sVaR) and Expected Shortfall (ES) to address potential concentration risks within each trading portfolio.

Apart from the VaR limits, various other limits such as DV01, CS01, FX NoP and concentrations limits are monitored by the Market Risk Management unit.

Market risk organization and structure

The Market Risk Organization is schematically shown in figure below:

The main responsibilities of Market risk management within the GMLR functions are reflected below:

Market Risk Appetite and Limits Framework

- Devising the limit framework within the market risk appetite defined by BRESGC
- Promote the structure and hierarchy of limits assigned to different businesses
- Define Group Level market risk parameters such as Currencies, Geographies, Approved Products and key risk sensitivities

Market Risk Oversight

- Supervision, control and monitoring of market risk for GM, GT and International Hubs
- Oversee the day-to-day effectiveness of the Bank's market risk management and internal controls.
- Portfolio Risk Analysis (regular and ad-hoc) & explain market risk exposures -communicate to key stakeholders including the business, GCRO
- Execution of Delegated Authorities including approval to the creation of new portfolios for the business
- Execute delegated authorities on Limits.
- Provide requirements for stress test scenarios framework.
- Ensure that GM, GT and International hubs take on market risk exposures within approved risk limits, record limit breaches and escalate these to the authority levels defined in the Group Risk Appetite document

Market Risk Control

- Manage market risk report production processes
- Daily Risk reporting, limit monitoring and breach escalation if any.
- Report on a periodical basis Group Market Risk exposures to IMCO / GALCO / Board or other Group level Committees

Collateral Management & Client Services

- Validation of margin calls / seeking margins based on MTM price movements of underlying for GMRA and CSA
- Conform to international regulations (such as EMIR and HKMA) as and when they become applicable to FAB activities

Market risk Measures and systems

The primary system used by market risk management is Murex where all the trades are being booked by GM & GT. Most of the risk measures are calculated in the system and being used by Market risk unit for risk measurement and reporting along with other units within the bank. Murex is a front to back system which is integrated to FAB's core banking system.

The system used for Market risk capital calculation is ACM which takes the input data primarily from Murex and the resultant calculations are done by the system as per the CBUAE regulations.

Defining suitable market risk measures which is central to an effective market risk management framework enables the process the setting the market risk appetite of the Bank

The measures of market risk for both trading and investments that are currently followed are:

- Value at Risk (VaR)
- Sensitivities - Different sensitivities are designed depending on the nature of product
- Exposures based measures
- Net open positions (for FX)
- Concentration based measures
- Management action triggers (similar to stop loss MtM)

The idea of having multiple risk measures is that a single measure may not explain the risk profile in its entirety, therefore a series of measurers complements one another to give a more complete picture of risk.

The above measures would be across all portfolios, desks/ products, GM / GT level and overall Bank level and covering all risk factors like Interest rates and its volatilities, FX spots and volatilities, credit spreads/curves, commodities etc.

Market Risk Reporting

Risk Reporting is essential to facilitate communication of risk information to relevant recipients to enable effective oversight on various components of market risk management. In this sense, risk reports are concise, accurate, comprehensible, and timely. Reporting covers current position, dynamics of risk exposure through time and exceptions from policy prescriptions.

Market Risk Control within GMLR is responsible for preparing the reports and submits them to different stakeholders, as applicable. The list of reports and their contents are annually reviewed by the Head of Market & Liquidity Risk.

The market risk reports, inter-alia, cover the following scope as per the Risk Appetite approved by respective committees:

Desk/GM/GT/Group utilizations vis-à-vis limits

12.2 MR1: Market risk under the standardised approach (SA)

Below table provides a breakdown of Market Risk RWA calculations under the Standardised Approach

All numbers in AED million

		31-Dec-24 RWA	31-Dec-23 RWA
1	General Interest rate risk (General and Specific)	26,748	24,512
2	Equity risk (General and Specific)	96	386
3	Foreign exchange risk	5,930	6,447
4	Commodity risk	406	1,296
	Options		
5	Simplified approach	-	-
6	Delta-plus method	2,434	3,669
7	Scenario approach	-	-
8	Securitisation	-	-
9	**Total**	**35,614**	**36,310**

13. Interest rate risk in the banking book

13.1 IRRBBA: IRRBB risk management objectives and policies

a	**A description of how the bank defines IRRBB for purposes of risk control and measurement**
	Interest Rate Risk in the Banking Book (IRRBB) refers to the current and prospective impact to the Bank's financial condition, from an earnings and economic value perspective, due to adverse changes in interest rates to which the Bank's balance sheet is exposed to. The earnings and economic value perspectives are measured through impacts on Net Interest Income (NII) and Economic Value of Equity (EVE)
b	**A description of the bank's overall IRRBB management and mitigation strategies.**
	Bank's Board of Directors is ultimately responsible for the risk management of the group. The Board through Board Risk and ESG Committee (BRESGC) delegates discretionary powers to G-ALCO for ongoing IRRBB management. G-ALCO establishes the policy framework, measurement methodologies, IRRBB risk limits, controls for monitoring and managing IRRBB. Additionally, G-ALCO reviews the IRRBB metrics and approves any hedging strategies proposed to mitigate IRRBB. Hedging of IRR is a dynamic process linked to assessment of market conditions vis-a-vis the risk exposure and any excess risk over the tolerable thresholds (limits) is macro-hedged through a range of balance sheet products (on balance sheet) and markets instruments including derivatives (off balance sheet) Bank has set up IRRBB risk limits both from an economic value (EVE / DV01) and earnings (NII) perspective. These metrics are measured over a range of Basel prescribed interest rate shock scenarios, internal interest rate shock scenarios and additional interest rate stressed scenarios. The methodology adopted for EVE measurement is in line with 2016 Basel guidelines Internal Audit Unit within the bank acts as the 3rd line of defence while performing regular Business audits. Additionally, the entire IRRBB framework, covering models, methodologies etc., used for IRRBB management are independently validated by external consultants.
c	**The periodicity of the calculation of the bank's IRRBB measures, and a description of the specific measures that the bank uses to gauge its sensitivity to IRRBB.**
	Bank regularly measures and monitors IRRBB risk metrics. The key standard measurements used across the Group are: - Economic Value of Equity based on Basel prescribed standardised interest rate shocks, internal interest rate shock scenarios and additional interest rate stressed scenarios. - Sensitivity to Net Interest Income (NII) over a 12-month horizon - Repricing GAP statement - DV01 IRRBB metrics are reported to G-ALCO on a monthly basis.
d	**A description of the interest rate shock and stress scenarios that the bank uses to estimate changes in the economic value of earnings.**
	The Basel prescribed 6 standardised interest rate shocks as per 2016 IRRBB guidelines are used for estimating EVE changes. Additionally, internal scenarios are defined depending on the market circumstances and their plausibility. These internal scenarios are approved by G-ALCO. Additional stress scenarios based upon historical market events and hypothetical scenarios to factor emerging risks are also used.
e	**Modelling assumptions**
	Bank applies modelling assumptions in line with 2016 Basel's IRRBB guidelines. Modelling assumptions for EVE used by the Bank for internal assessment is in line with the IRRBB disclosures.
f	**A high-level description of how the bank hedges its IRRBB, as well as the associated accounting treatment.**
	The Bank relies on natural hedges generated by interest rate sensitive assets & liabilities. Any residual risk exposure is hedged through the usage of derivatives such as Interest Rate Swaps, Cross Currency Swaps, Futures et.al. The derivative hedges classify as cash flow hedge or fair value hedge.

g	**Key modelling and parametric assumptions used in calculating ΔEVE and ΔNII**
	Bank excludes commercial margin from computation of EVE analysis both for cash flow estimation as well as discounting purposes for balance sheet products unless market prices of a product are readily available. Risk free rate curve as observed from cash, future and swap markets are used for discounting purposes. Repricing of non-maturing products is determined by overlaying Basel prescribed caps or management methodology of coupon payments, on the internal estimation of core / non-core balances based on their historical behavior On prepayments, deposits are typically booked with short maturities to be rolled over and loans are predominantly aligned to market pricing on floating rate basis Optionality emanating from explicit interest rates floors and caps embedded in balance sheet products are considered while calculating IRRBB measures.
1	Average repricing maturity assigned to NMDs – 1.6 Years
2	Longest repricing maturity assigned to NMDs 5.0 Years

13.2 IRRBB1: Quantitative information on IRRBB

The below tables provides information on the Bank's changes in economic value of equity and net interest income under the prescribed interest rate shock scenarios

All numbers in AED million

	ΔEVE		ΔNII	
Period	**31-Dec-24**	**31-Dec-23**	**31-Dec-24**	**31-Dec-23**
Parallel up	871	2,113	1,243	1,794
Parallel down	(715)	(1,624)	(1,420)	(1,971)
Steepener	215	(96)		
Flattener	212	729		
Short rate up	460	1,412		
Short rate down	(559)	(1,537)		
Maximum	(715)	(1,624)		
Period	**31-Dec-24**		**31-Dec-23**	
Tier 1 capital	98,277		91,986	

Note: Negative numbers indicates loss
The maximum loss of AED 715 Mn is based on the ΔEVE Parallel down shock

14. Operational Risk

14.1 OR1: General qualitative information on a bank's operational risk framework

Operational Risk

First Abu Dhabi Bank (FAB) has adopted the definition of Operational risk as the risk of loss resulting from inadequate or failed processes, people, systems or external events. Operational risks can arise across all business functions within the Group, and the primary responsibility for managing and monitoring these risks lies with each business unit.

Managing operational risk is essential for ensuring the safety and soundness of the bank's operations, protecting stakeholders, and achieving regulatory compliance.

FAB has implemented an effective operational risk management cycle to ensure robust risk oversight in line with its operational risk management policy, procedures, guidelines and governance framework. This cycle includes the identification, assessment, treatment, and monitoring of operational risks. Initially, operational risks are identified and categorised by business owners through Operational Risk Matrices, aligned with the Basel Accord. This assessment evaluates key risks across all products, services, processes, projects, product channels, systems, and the bank's own or outsourced activities. This comprehensive approach enables proactive management and oversight of operational risks throughout the organization.

Operational risk management follows the three lines of defence model:

The Board, through the Board Risk & ESG Committee (BRESGC), has the overall responsibility for managing operational risk at the Bank and ensures that the three lines of defence approach is implemented and operated in an appropriate and acceptable manner.

FAB has also formed the Group Operational & Fraud Risk Committee (GOFRC), a management level committee delegated by BRESGC and Group Executive Committee (EXCO) to provide oversight on all material operational risks, operationalize the Group Operational Risk Management policy, ratify operational risk strategies, and ensure alignment of the business strategies with risk priorities to protect and enhance shareholder's value.

FAB operates under a 'three lines of defence' model for managing risk, forming the cornerstone of its risk management framework. This approach ensures clear roles and responsibilities for managing risks and maintaining effective internal control across the organization, while promoting robust governance, accountability, and an integrated approach to risk management in alignment with regulatory requirements and good practices.

First Line of Defence: Business Units and Support/Operations Functions –

The first line of defence comprises FAB's business units and support/operations functions, which are responsible for identifying, owning and managing risks in their day-to-day operations. Key responsibilities include:

- Risk Identification
- Risk Ownership
- Implementation of Controls
- Self-Assessment
- Issue Resolution

By managing risks at the source, the first line of defence ensures that risks are controlled at the operational level and remain within the bank's risk appetite.

Second Line of Defence: Risk Management and Compliance Functions –

The second line of defence comprises FAB's independent risk management, compliance, and oversight functions, which provide governance, oversight, and challenge to the first line. Key responsibilities include:

- Development of risk framework and policies
- Independent monitoring of risk exposures and control effectiveness
- Guidance on risk management practices and control design
- Challenge and review the adequacy of risk assessments & controls

The second line acts as an independent layer of oversight, ensuring that risks are managed within the approved risk appetite and in compliance with applicable laws and regulations.

Third Line of Defence: Internal Audit –

The independent Internal Audit function constitutes the third line of defence, providing assurance to the Board of Directors and senior management on the effectiveness of the bank's risk management, control, and governance processes. Key responsibilities include:

- Independent assurance
- Objective reporting
- Risk based audit
- Follow-up and validation

Internal Audit provides independent assurance that FAB's risk management and control frameworks are effective, functioning as intended, and continuously improved.

Each line has distinct but complementary responsibilities, and FAB's risk management framework provides for collaboration and communication between all three lines of defence. This integrated approach fosters a strong risk culture.

Operational Risk Management Framework (ORMF)

FAB's Operational Risk Management Framework is a set of interrelated tools and processes that are used to identify, assess, measure, monitor and remediate operational risks. Its components have been designed to operate together to provide a comprehensive approach to managing the bank's operational risks.

The Bank's operational risk management framework is defined in the policy approved by the Board. While the policy provides a broad framework, detailed standard operating procedures for operational risk management processes have also been established.

ORMF components include the roles and responsibilities for the operational risk management process and appropriate independent challenge, approach to setting operational risk appetite and adhering to it, operational risk types and control taxonomies, minimum standards for operational risk management processes including tools, independent governance, and the Bank's operational risk capital model.

The assessment of risks is a responsibility of the first line which will consider the guidance of the second line Operational Risk function to determine the criticality of the risks according to their frequency (probability of occurrence) and impact (severity). The next steps are to prioritize, evaluate, and implement the appropriate risk-mitigating controls through the treatment phase. This consists of defining the controls for those risks that we have identified, seeking to reduce the likelihood of their occurrence or reduce the impacts they may cause. Through the risk monitoring phase of the operational risk management process, the current risk level and the effectiveness of the risk management are monitored. Risk indicators, both qualitative and quantitative, are established with threshold limits to best monitor material operational risks through the business lines.

Tools used for Operational Risk Management:

a) Risk and Control Self-Assessment
b) Incident Management & Loss Recording
c) Key Risk Indicator Management
d) New Product Approval
e) Operational Risk Assessment of Projects (ORAP)
f) Review of Policy and Procedures
g) Operational Risk Reporting
h) Training and awareness to build and promote risk awareness culture

To help facilitate effective operational risk management, the Bank has implemented a comprehensive operational risk management IT system. The application comprises various modules namely incident management, risk and control self-assessment, key risk indicators, and action plan tracker.

Operational Risk Appetite

FAB's operational risk appetite defines the level and type of operational risks the bank is willing to accept in its daily operations while pursuing its strategic objectives. It ensures that operational activities are conducted within acceptable risk limits, aligning with the Group's broader Risk Appetite Framework and Statement. This considers the following attributes:

- Alignment with Business Strategy
- Integration with Group Risk Appetite Framework
- Establishment of Risk Tolerances
- Embedding into Decision-Making
- Monitoring and Review

By embedding the operational risk appetite into the Group's Risk Appetite Framework and Statement, FAB ensures a coherent approach to risk management. This approach helps maintain operational discipline, support sustainable growth, and protect the bank's operations and reputation.

Operational Risk Management Governance
The Bank has a comprehensive operational risk governance structure, in line with corporate governance requirements from the Central Bank of UAE. The Group Operational Risk Management Function (GORM) reports into the Group Chief Risk Officer who reports to the Board through BRESGC.

Capital Requirement for Operational Risk
In accordance with the Central Bank of UAE guidelines, Bank has adopted the Standardised Approach for computing capital charge for operational risk.

Reporting Framework
FAB recognizes the importance of risk reports which contributes to sound risk management and decision-making by their relevant recipients, including, the Board, Risk Committees and senior management. Risk reports prepared by the Bank are meaningful and tailored to the needs of recipients. GORM submits periodic reports to the Board, Risk Committees and senior management.

Insurance
FAB has recognised the need for having insurance policies which act as risk mitigant against risks such as, but not limited to, infidelity, forgery & alterations, computer crime, director liability, damage to property, professional indemnity, cyberattacks, etc. and provides support for financial losses incurred during such events.

Outsourcing Risk
To effectively manage Outsourcing and its associated risks, FAB has implemented a robust Outsourcing Policy and Framework which assists and governs all Business Units across the Group in managing and making decisions pertinent to outsourcing. FAB requires that all outsourcing arrangements undergo rigorous risk assessments and ongoing monitoring to mitigate potential risks. The overall governance responsibility of the Outsourcing of services rests with the Board of Directors (Board) / Board Risk and ESG Committee (BRESGC). The Board / BRESGC has delegated the execution and control responsibility of the same to the Executive Management Committee.

Emerging Risk Identification
The impact of changes in the risk profile because of new products, strategic initiatives, material system/process changes and outsourcing activities are assessed & approved. Subsequently, the identified operational risks are compared to the risk appetite statement for mitigation or acceptance. For risk mitigation there is systematic monitoring of the implementation of risk mitigation measures. Specific risks rated residually beyond the risk appetite need to be accepted by business and are validated by GORM and follows formal governance process. Risk acceptances are valid for a maximum of 12 months (or less) and the risks are regularly revaluated until appropriately mitigated.

Additional functions, methodologies & tools implemented by the responsible second line functions are utilised to complement the Operational Risk Framework to address the specific risk types. These include but are not limited to:

a) Fraud Risk is managed based on local regulatory requirements and governed by the Fraud Risk & Investigation policy.

b) Business Continuity Management program outlines the relocation and recovery of operations in response to varying levels of disruption and periodically test the infrastructure and BCM plans to promote continuous services.

c) Operational risk in Technology is managed by Tech Risk functions and all applications and infrastructure are catalogued and assessed periodically. Stable monitoring of IT assets is established. All key outcomes of monitoring are used for further and on-going monitoring of technology risks.

Performance of Operational Risk Management 2024

During 2024, risks associated with technology, digital banking and other products & services implemented were assessed and refreshed in the Bank's operational risk library. The Bank evaluated operational risks in new product and service implementation projects for 2024. Operational risks will be reviewed and updated as the Bank continues to expand its operations and rolls out new products and projects contemplated in its Strategic Business Plan. The Bank conducted mandatory training for its personnel in operational risk management.

The Bank in 2025 will focus on the afore-mentioned emerging risks in outsourcing, technology and digital as the Bank's business grows and its projects are implemented, to ensure that these risks are measured, controlled, and appropriately treated in a timely manner such that operational risk management continues to enable business growth.

15. Remuneration Policy

15.1 REMA: Remuneration policy

Board REMCO

The Board Remuneration and Nominations Committee (REMCO) is responsible for the review of FAB's reward policy framework along with the oversight and approval of the rewards design methodology consistent with FAB's culture, values, business performance and risk strategy.

The Committee is composed of three (3) Board members, all of whom are non-executive directors, including the Chairman. Along with other Board members, the REMCO also comprises the Group Chief Executive Officer of the Bank who attends the meeting of the REMCO as an Executive Member and the Group Chief Human Resources Officer of the Bank as a permanent attendee.

Remuneration Policy

The Group remuneration policy is applicable to all employees of FAB group, including subsidiaries, associated companies managed by FAB and all international locations

Overview of Rewards Policy

The REMCO oversees the Group's Rewards framework and its application to Group Businesses. The Rewards framework in the Group follows the principles mentioned below:

- Ensure that the Rewards framework is market competitive and linked to Shareholder interest, the Group's business strategy and long-term goals.
- Ensure that rewards processes and decisions are fair, transparent and equitable.
- Ensure equitable pay and opportunity to all employees doing similar work, regardless of employment status, through a framework which is based on objective criteria and free from any bias on grounds of gender.
- Ensure strong linkage of individual's variable pay to Group's performance against strategic objectives as set out in the performance scorecard and individual performance.
- Ensure differentiated pay mix (fixed to variable ratio) for employees at different management levels and functions.
- Ensure that there are effective safeguards in place to align rewards policies with Group's risk appetite, regulatory / legislative requirements and appropriate control mechanisms / governance frameworks that the Group needs to comply with, as relevant in the geographies that it operates in.
- Ensure that variable component of pay is earned every year and is not guaranteed, except in cases where the Group may cover financial loss that a prospective employee may incur at the time of joining the Group.
- Ensure that deferral of variable pay is introduced for payout amounts above a certain value and specific roles to tie recipients to the future performance of the Group.
- Allow cancellation / reduction of unvested deferred pay awards, subject to compliance with labour laws, for individuals who violate Group policies or engage in activities / misconduct that undermine the risk management of the Group.
- Ensure that individuals responsible for Control functions (Risk management, Legal, Compliance and Internal Control) are not remunerated in such a way that leads to conflicts of interest. The variable compensation for these employees should not be directly dependent on the results achieved by the business units, individual products or transactions that they monitor. This is achieved by ensuring that the BSC is appropriately structured and that KPIs that cause conflict of interest in the discharge of their responsibilities are avoided in the BSC.
- Ensure that Sales / Collections incentive schemes are linked to organizational priorities and approved by Finance, Risk, Compliance and HR Functions.
- All Rewards decisions in international locations are taken by the country representatives and relevant functional managers in consultation with each other in alignment with the Group's operating principles and in compliance with local regulations.
- No Executive in the Group is involved in deciding his/her own remuneration.

Remuneration Policy review

The Remuneration is reviewed regularly and was last reviewed by the board REMCO for appropriateness in 2023.

REMCO reviewed FAB's variable compensation structure and included long-term incentives to ensure alignment of senior management with strategic objectives of the bank

Rewards Framework

In line with our Rewards philosophy, our compensation structure contains a healthy mix of fixed and variable pay.

- **Fixed pay** is aligned to external market benchmarks to ensure that we attract best-in-class talent by paying competitively. Other key features of our fixed pay are:
    - Gross salary is a fixed cash component that is paid monthly on a specific date of each month, dependent on the geographic location. This is typically comprised of Basic Salary and Allowances. Allowances may differ by geographic location, in line with local market practice and labour law.
    - Gross Salary is linked to the nature and relative size of job in the organization. The Group uses an established job evaluation methodology to ensure that all jobs are sized appropriately.
    - Independent and globally credible sources are employed for the salary benchmarking process to ensure employee salaries are market competitive.
    - The Group may, in its absolute discretion, conduct a fixed pay review and may award salary increases to its employees to maintain market competitiveness while ensuring transparency and fairness in compliance with the country specific labour laws. Decisions typically involve the following factors:
        - Organizational priorities and budget availability
        - Incumbent's performance
        - External market alignment
        - Internal equity

- **Variable pay** is linked to performance. Performance is tracked through the elements of the balanced scorecard (BSC) which align the interests of the employees with those of our stakeholders. To ensure sustainable growth, there is a strong emphasis in the balanced scorecard on 'how' the business growth is achieved in addition to 'what' was achieved. The key elements of the BSC include (but not limited to) Revenue, Net Profit, RoRAE, stable funding ratios, CET 1 ratios, asset quality and transformation KPIs.
    - The Group's variable compensation may be structured through a combination of cash or non-cash instruments. Variable compensation is discretionary in nature and the framework for the same is approved by the REMCO for the year and is closely linked to a Balanced Score Card ("BSC") where multiple financial and non-financial measures are put in place. The framework used to define the quantum of variable pay available to the organization (or unit) is linked to Overperformance, on-target performance or under performance primarily against the relevant BSC. The base value of variable pay is based on a defined target level of variable pay. In the event of over performance or under performance, the pool is adjusted appropriately. The variable pay of the organization is discretionary in nature and is subject to multiple levels of internal governance to oversee the discretionary decisions.
    - The Group's variable compensation framework and employee eligibility to it is subject to change each year but considers:
        - Overall Risk/Reward Strategy and approach;
        - Group, Divisional and Individual Performance;
        - Budget availability
        - Country specific labour law and/or regulatory requirements
        - External benchmarks and Internal Equity
    - Individual Performance, as referred to above, is assessed against financial and non-financial measures (such as control and efficiency measures) and acts as input to determination of individual bonuses.

- All employees on the payroll of the Group and not covered under any commission or incentive plan are eligible for the discretionary annual variable pay
- Allocations are made to the Business Unit and the individual thereafter. There are multiple levels of validation which culminate in Senior Management sign off in order to ensure that all principles are adhered to.

- **Deferred bonus:** To ensure decisions making is rooted in long term sustainability of the organization, appropriate deferral mechanisms are applied on the variable pay. The deferrals are commensurate to the value of variable pay and reflect the level of decision making along with impact on the business outcomes. Part of the deferred variable pay is subject to organizational performance over the vesting period. In all cases, variable pay (paid and deferred amounts) is subject to claw-back and malus to ensure risk alignment. Other key features of FAB's deferred bonus scheme
  - The Group reserves the right to defer any part of an employee's variable compensation based on the criteria approved by the REMCO in alignment with the Risk appetite of the Group. Deferral may be applied on the basis of a pre-defined value or for certain specific roles.
  - The deferral period is linked to the medium-term strategy of the Group and is typically three years, with a certain percentage of the overall amount vesting every year. This is however, subject to change in line with change in Group strategy.
  - The deferral scheme uses a consistent methodology and thresholds for deferring variable pay across the bank barring in jurisdictions where local regulations require a different approach to be used.
- Benefits: All employees on the payroll of the Group are eligible for non-pay benefits such as leave entitlement, Medical Insurance, Life Insurance etc.

The Bank's rewards philosophy and strategy aim to align with internationally accepted reward practices and with the current CBUAE guidelines that underpin rewarding sustainable risk taking.

External consultants advice

The bank engages with multiple specialised HR consulting organizations like Korn Ferry Hay Group, Aon Mclagan and others. Such engagements are sought regularly to source market data, to seek advice on creation of competitive rewards frameworks and to ensure that the groups remuneration policy and practices are in line with market and compliant with regulatory requirements.

Material Risk Taker and Senior Managers

Members of the Executive Committee who report to the GCEO and who perform roles approved by CBUAE in a permanent capacity are defined as Senior Management.

The Board REMCO has approved a Material Risk Taker framework aligned to the risk appetite of the bank. The framework identifies key senior roles who are deemed to have a significant impact on the overall risk profile of the bank; and includes the following categories

a) Permanent Members of Tier 1 management committees
b) Senior roles in First, Second and third lines of defence
c) Other roles capable of taking on material risk for the bank

15.2 REM1: Remuneration awarded during the financial year

Below table provides a snapshot of the fixed and variable remuneration for the year

All numbers in AED million

			31-Dec-24		31-Dec-23	
	Remuneration Amount		Senior Management	Other Material Risk-takers	Senior Management	Other Material Risk-takers
1		Number of employees	15	40	15	35
2		Total fixed remuneration (3 + 5 + 7)	39.5	56.8	35.6	47.9
3		Of which: cash-based	39.5	56.8	35.6	47.9
4		Of which: deferred	-	-	-	-
5	Fixed Remuneration	Of which: shares or other share-linked instruments	-	-	-	-
6		Of which: deferred	-	-	-	-
7		Of which: other forms	-	-	-	-
8		Of which: deferred	-	-	-	-
9		Number of employees	15	40	15	35
10		Total variable remuneration (11 + 13 + 15)	37.4	31.9	29.7	24.8
11		Of which: cash-based	37.4	31.9	29.7	24.8
12		Of which: deferred	16.2	7.7	12.8	5.9
13	Variable Remuneration	Of which: shares or other share-linked instruments	-	-	-	-
14		Of which: deferred	-	-	-	-
15		Of which: other forms	-	-	-	-
16		Of which: deferred	-	-	-	-
17	**Total Remuneration (2+10)**		**76.9**	**88.7**	**65.3**	**72.8**

Note 1) Fixed remuneration includes total fixed remuneration received during the year and variable remuneration includes long term and shorts term awards made during the year

Note 2) Senior Management includes all direct reports of the GCEO who were part of the EXCO at anytime in the year occupying CBUAE approved positions (excluding any individual performing these roles in an acting capacity).

Note 3) MRT - Defined as per REMCO approval on MRT roles including any individual performing these roles in an acting capacity. MRTs include those who fall under the group MRT framework. Roles identified as MRT at country level based on country level definitions have been excluded as they do not meet the group MRT framework.

15.3 REM2: Special payments

Below table provides a snapshot of the quantitative information on special payments for the financial year

All numbers in AED million

Special Payments	Guaranteed Bonuses		Sign on Awards		Severance Payments	
31-Dec-24	Number of employees	Total amount	Number of employees	Total amount	Number of employees	Total amount
Senior Management	-	-	3	4.8	1	0.7
Other material risk-takers	-	-	4	6.0	-	-

Note1) Severance pay includes only values over and above the contractual requirements; payments that we were part of the contractual requirement such as notice period in lieu, gratuity, leave encashment have been excluded.
Note2) Sign bonus paid during the year have been included

Special Payments	Guaranteed Bonuses		Sign on Awards		Severance Payments	
31-Dec-23	Number of employees	Total amount	Number of employees	Total amount	Number of employees	Total amount
Senior Management	-	-	6	4.4	1	1.5
Other material risk-takers	-	-	6	3.1	-	-

15.4 REM3: Deferred remuneration

Below table provides a snapshot of the quantitative information on deferred remuneration payments for the financial year

All numbers in AED million

31-Dec-24 Deferred and retained remuneration	Total amount of outstanding deferred remuneration	Of which: Total amount of outstanding deferred and retained remuneration exposed to ex post explicit and/or implicit adjustment	Total amount of amendment during the year due to ex post explicit adjustments	Total amount of amendment during the year due to ex post implicit adjustments	Total amount of deferred remuneration paid out in the financial year

Glossary

Capital Conservation Buffer

A capital buffer introduced by Basel Committee on Banking Supervision (BCBS) under Basel III to ensure that banks have an additional layer of usable capital that can be drawn down when losses are incurred. The buffer was implemented in full as of 2019 and is set at 2.5% of total risk-weighted assets. It must be met with Common Equity Tier 1 (CET1) capital only, and it is established above the regulatory minimum capital requirement. Whenever the buffer falls below 2.5%, automatic constraints on capital distribution are imposed so that the buffer can be replenished.

Central Counterparty (CCP)

A financial entity that interposes itself between counterparties to contracts traded within one or more financial markets providing clearing and settlement services, becoming the legal counterparty such that it is the buyer to every seller and the seller to every buyer.

Counterparty Credit Risk (CCR)

The risk that the counterparty to a transaction could default before the final settlement of the transaction in cases where there is a bilateral risk of loss.

Credit Conversion Factor (CCF)

Factors used to convert off-balance-sheet items into credit exposure equivalents.

Credit Risk Mitigation (CRM)

Technique used by a credit institution to reduce the credit risk associated with exposures it holds.

Domestic Systemically Important Banks (D-SIBs)

Certain large banks are tracked and labelled by regulatory authorities as Systemically Important Financial Institutions (SIFIs), depending on the scale and the degree of influence they hold in global and domestic financial markets, while individual countries also maintain their own lists of Domestic Systemically Important Banks (D-SIBs). Banks designated by the Central Bank as domestic systemically important banks are required to hold additional risk-based capital ratio buffers, applied to Common Equity Tier 1 (CET1). Banks are notified individually by the Central Bank with regard to the additional requirements.

Internal Capital Adequacy Assessment Process (ICAAP)

A CBUAE requirement falling under Pillar II of the Basel framework, requiring each bank to develop and document its own Internal Capital Adequacy Assessment Process (ICAAP) that is commensurate to the banks' activities and risk profile.

Leverage Ratio

Introduced under Basel III, the CBUAE's leverage ratio framework introduces a simple, transparent, non-risk based measure to act as a credible supplement to the risk-based capital requirements.

Liquidity Coverage Ratio (LCR)

LCR is the ratio of the stock of High Quality Liquid Assets ("HQLA") to total net cash outflows over the next 30 days. It represents a 30 days stress scenario with combined assumptions covering both bank specific and market wide stresses.

Net Stable Funding Ratio (NSFR)

The NSFR supplements the LCR and has a time horizon of one year. It has been developed to promote a sustainable maturity structure of assets and liabilities. It ensures that longer-term assets are funded with at least a minimum amount of stable liabilities over a 12-month time horizon.

Over-the-counter (OTC) Derivatives

contracts that are traded (and privately negotiated) directly between two parties, without going through an exchange or other intermediary.

Potential Future Exposure (PFE)

An estimate of the potential increase in exposure to counterparty credit risk against which regulatory capital must be held.

RWA Density

The risk-weighted asset as a percentage of exposure at default (EAD).

Securities Financing Transactions (SFT)

Transactions such as repurchase agreements, reverse repurchase agreements, security lending and borrowing, and margin lending transactions, where the value of the transactions depends on market valuations and the transactions are often subject to margin agreements.

Standardised Approach (SA)

Credit risk: method adopted for calculating credit risk capital requirements using External Credit Assessment Institutions (ECAI) ratings and risk-weights as mandated by CBUAE.

Operational risk: method adopted for calculating the operational risk capital requirement by the application of a supervisory defined percentage charge to the gross income of CBUAE specified business lines.
